

NRV - Nice Return Visits

Setup Guide & User Manual

Introduction

Nice Return Visits (NRV) is intended to make keeping track of return visits in a straight-forward manner, with options for adding features making it more robust, like tracking time and encrypting data, or using the cloud.

Why "Nice Return Visits"?

The name was chosen deliberately. Saying "I have a return visit" or "I have a nice return visit" is seems like "I have a friend" or "I have good friend".

Saying "I have a nice return visit" feels different. It suggests someone we have come to know, someone we enjoy visiting, or simply someone we have come to regard as a nice person, someone who may come to love Jehovah. That small word modifies the urgency to help others. We love Jehovah and our neighbors.

Start Simple, Add What You Need

NRV is designed so that the basic functions are foremost. You can keep contacts, locations, and return-visit notes without being required to use every feature in the application.

For those who want more, optional features include passphrase protection and encryption, backup and, for now, Dropbox, as well as Time in Service tracking. Use the parts that are useful to you and add other features only if and when you want them.

About iPhone and Android

The installation instructions and screenshots in this edition were created and tested on an iPhone using Safari. NRV has not yet been tested on an Android device, so Android-specific NRV behavior needs verification.

Based on current Google Chrome guidance for Android web apps, the expected process is to open NRV in Chrome and tap the More menu beside the address bar. Tap the menu item labeled "Install and create shortcut," then select "Install" and follow Chrome's on-screen instructions. These are successive menu choices—not instructions to create a shortcut and then open it. Android users who are willing to provide screenshots and feedback can help us verify and improve a future Android section.

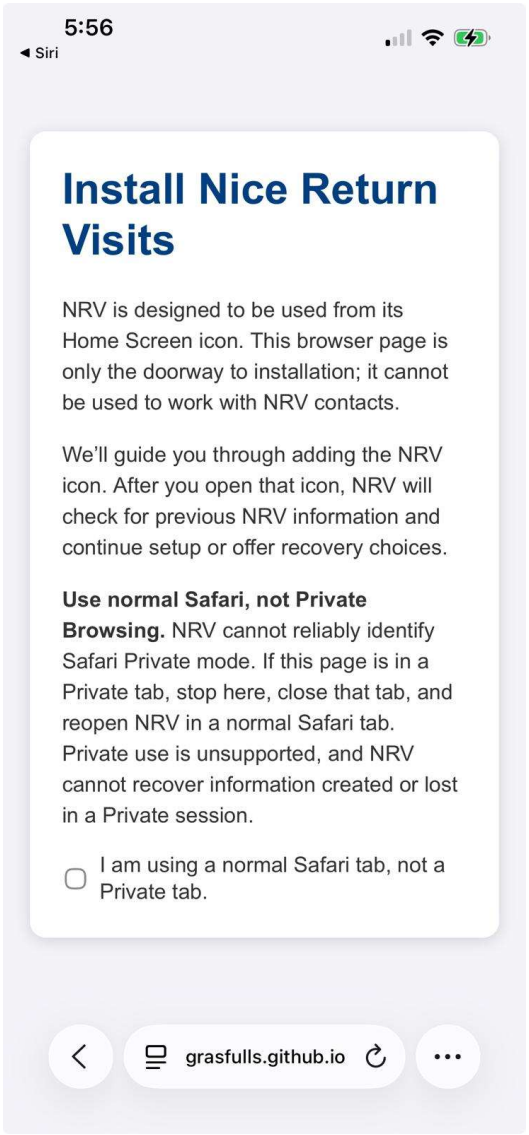

This Manual May Grow or Change With NRV

This User Manual is being developed alongside NRV itself. The screenshots and directions are checked against the actual application. If something is confusing, does not work as expected, could work better, or if there is something you would like NRV to do that it does not do today, please tell us. Questions and suggestions can be sent to ReachOut@nrvisits.org.

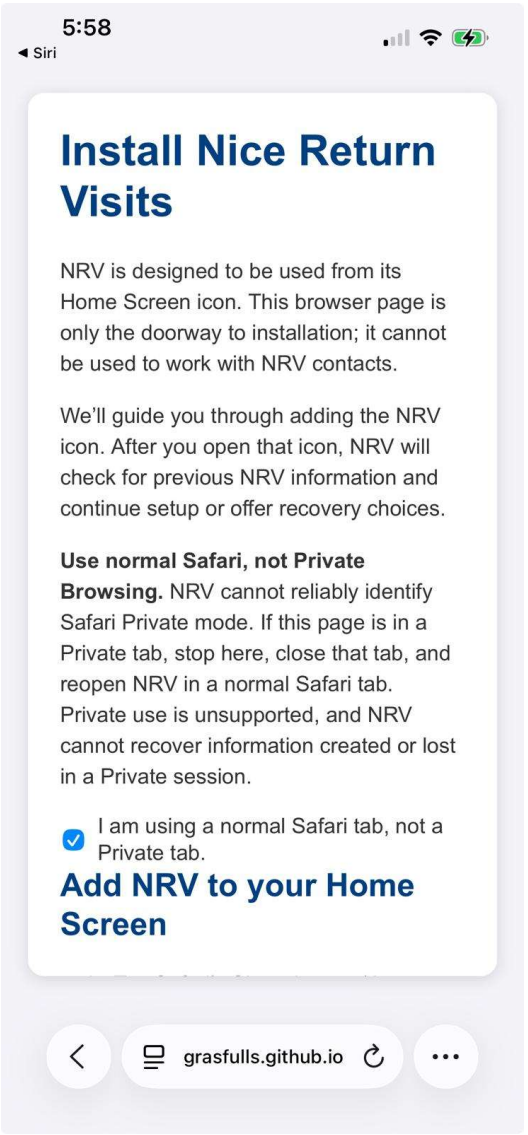

Table of Contents

Introduction 1
1. Install NRV on an iPhone 3
2. First-Time Setup 5
3. Contacts and Map Pin Setup 11
4. Record a Visit 13
5. Map and Directions 15
6. Settings and Optional Features 16
7. App Updates and Help 20
8. Existing Data / Start Fresh 21
9. Contacts: Urgency, Pins, Filters, and Sorting 22
10. Contact Actions: Share, Print, and Export 27
11. Time in Service 30
12. Data/Security: Passphrase Protection 32
13. Backup and Restore 35

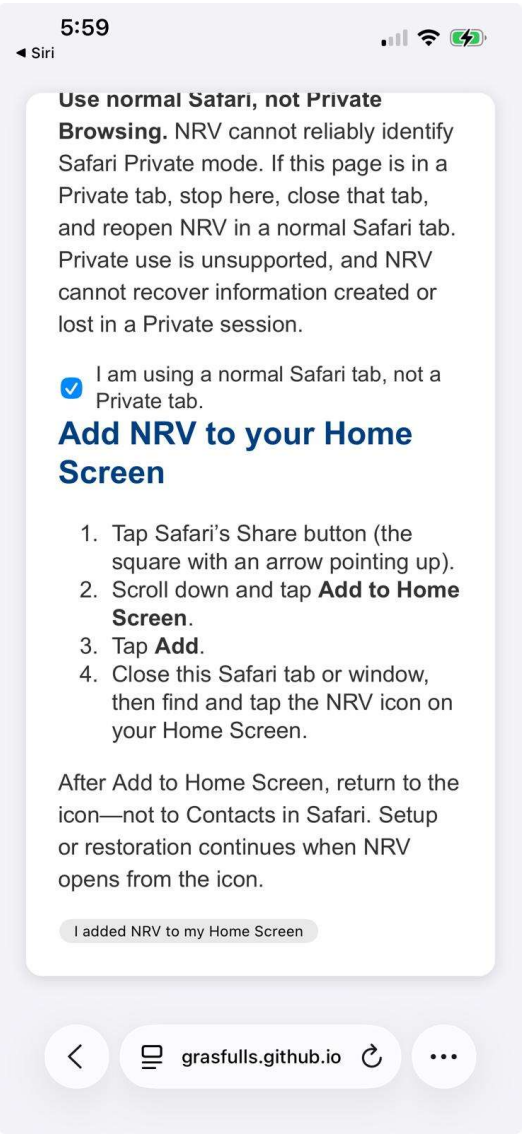

1. Install NRV on an iPhone

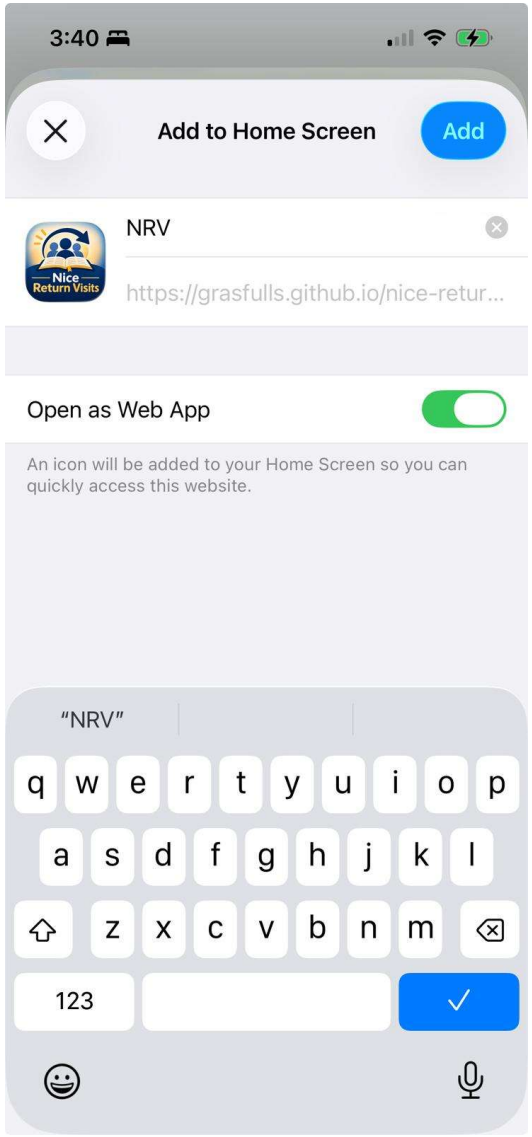

Step 1. Open the NRV installation page in Safari.

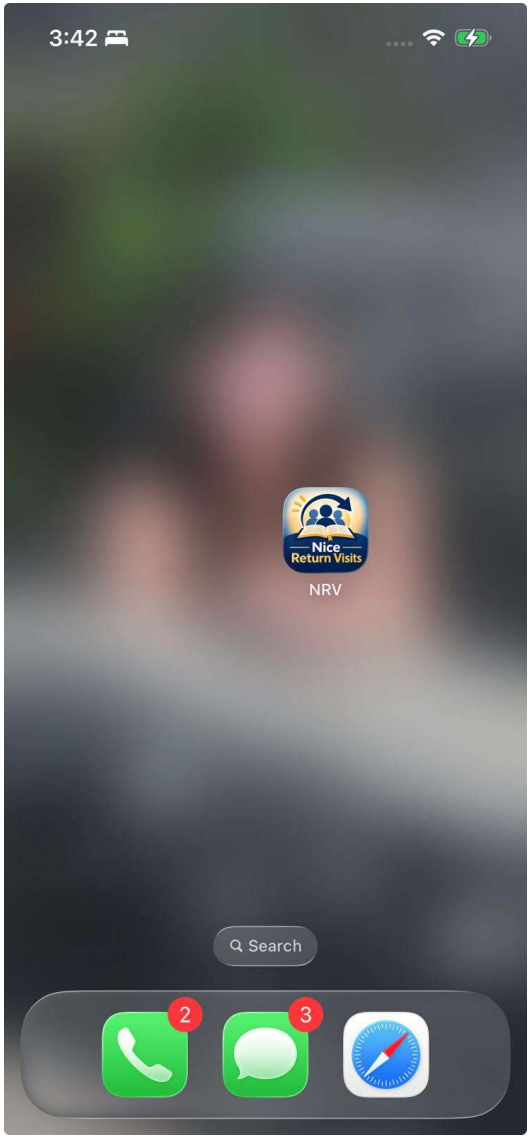

Step 2. Confirm Safari is using a normal tab, not a Private tab.

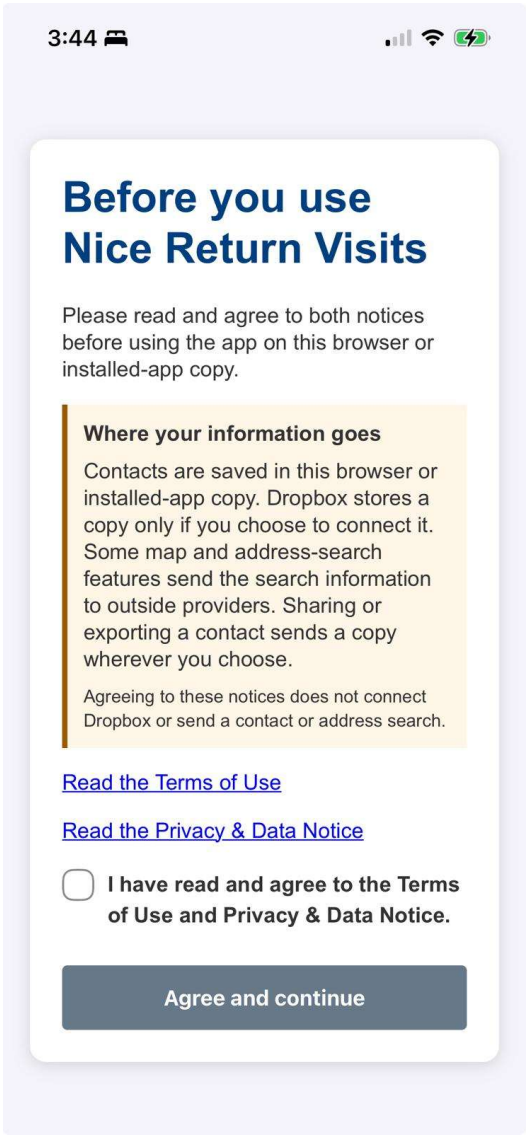

Step 3. Follow the Add to Home Screen instructions.

Step 4. Leave Open as Web App enabled and select Add.

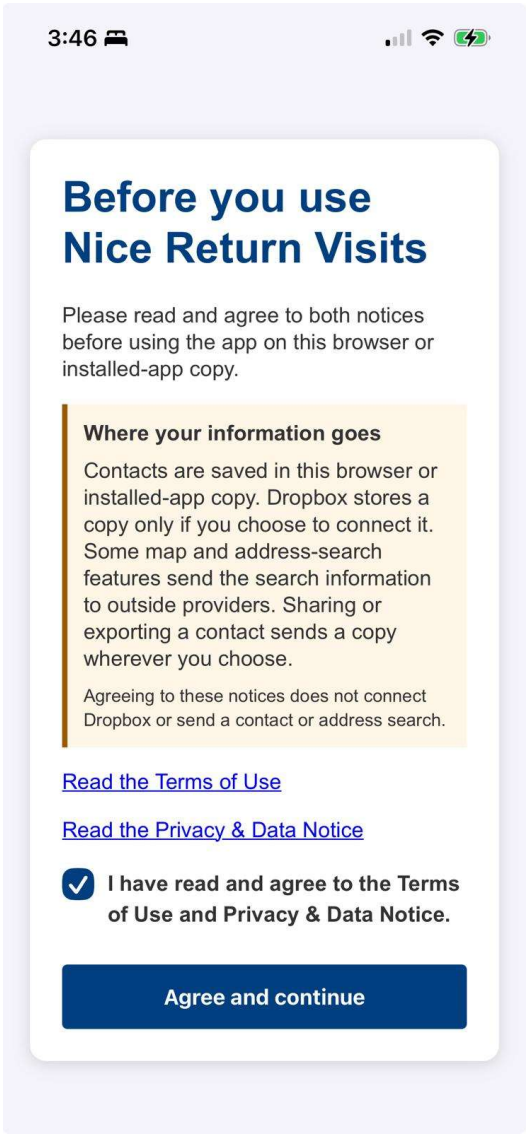

Step 5. Open NRV from the new Home Screen icon.

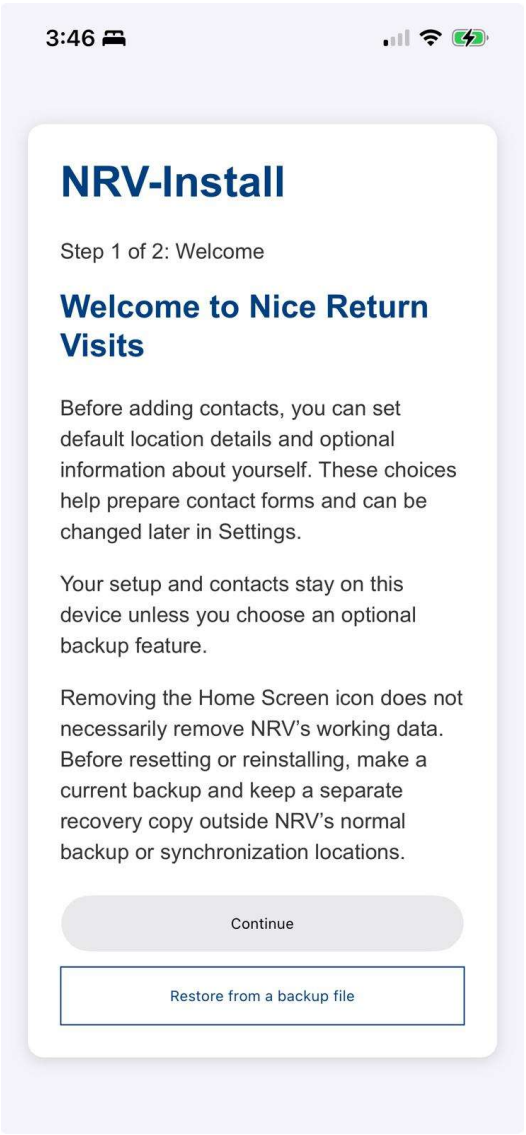

Step 6. Review the Terms of Use and Privacy & Data Notice.

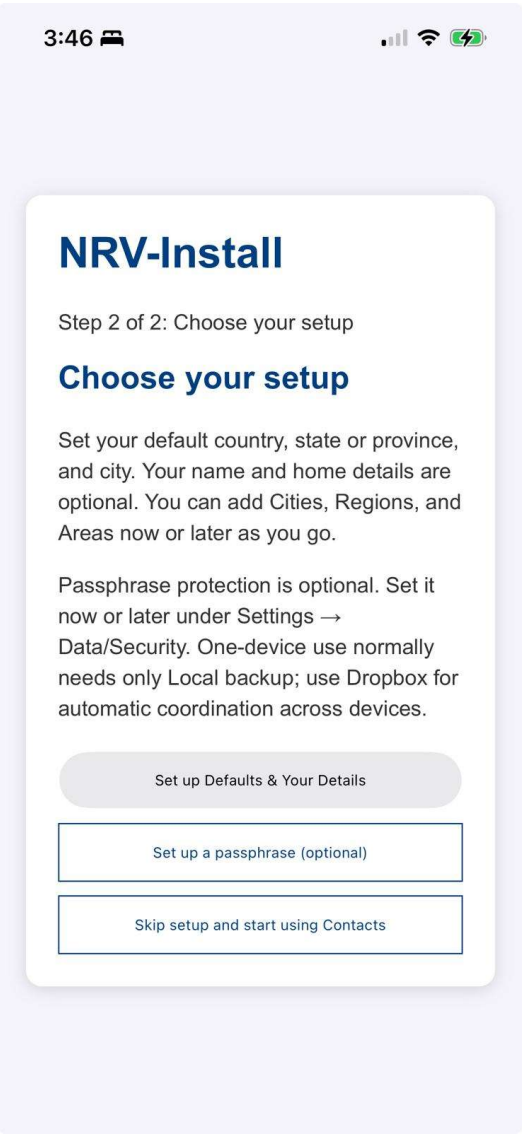

2. First-Time Setup

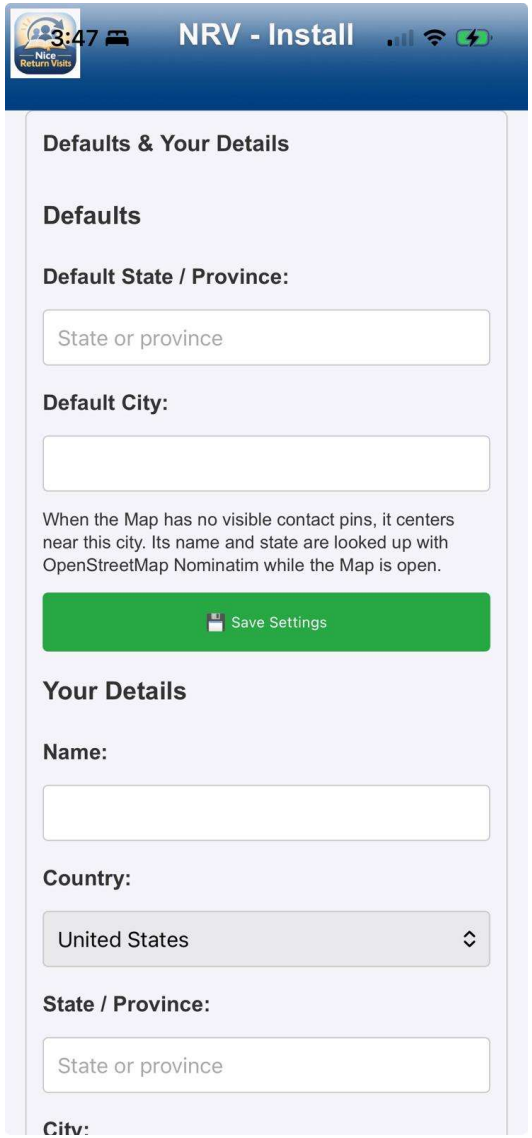

Step 7. Select the agreement checkbox and continue.

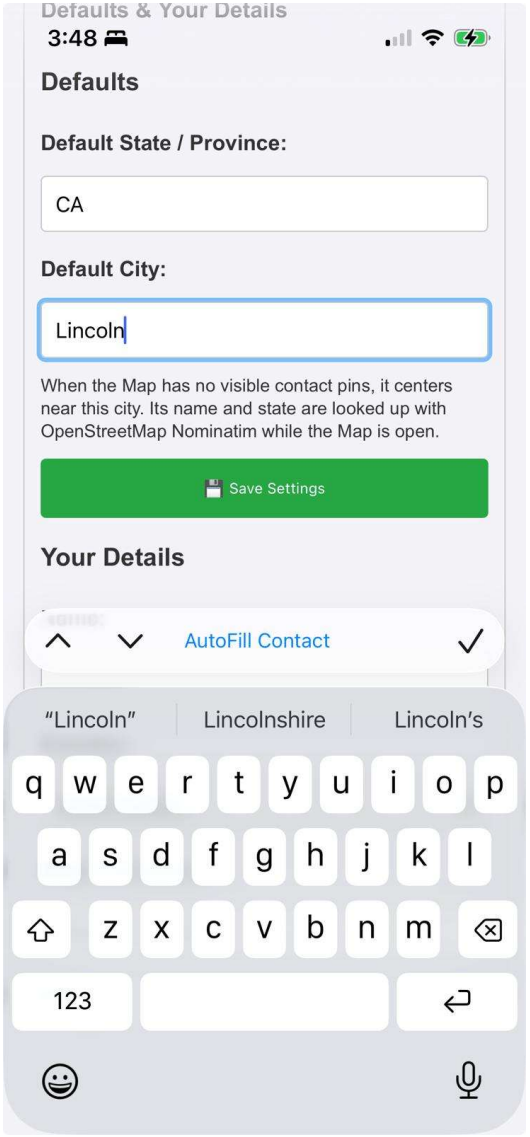

Step 8. Continue through the NRV installation welcome screen.

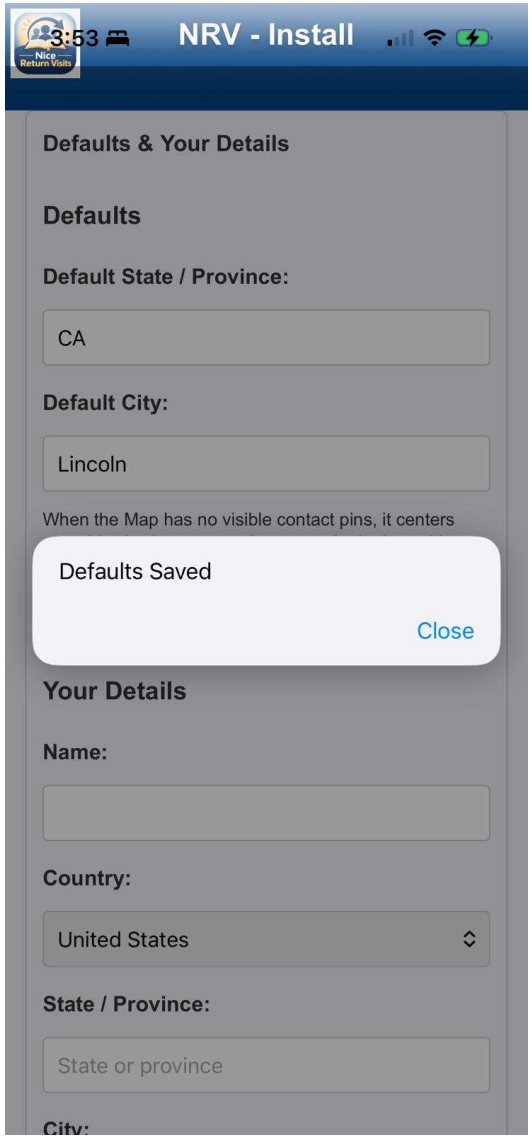

Step 9. Choose the setup path that applies to this installation.

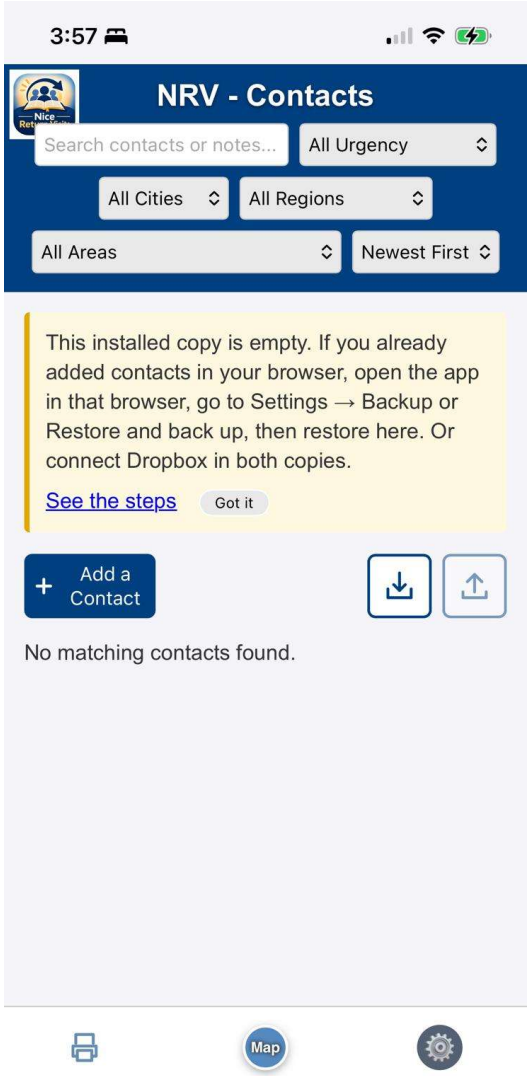

Step 10. Open Defaults & Your Details.

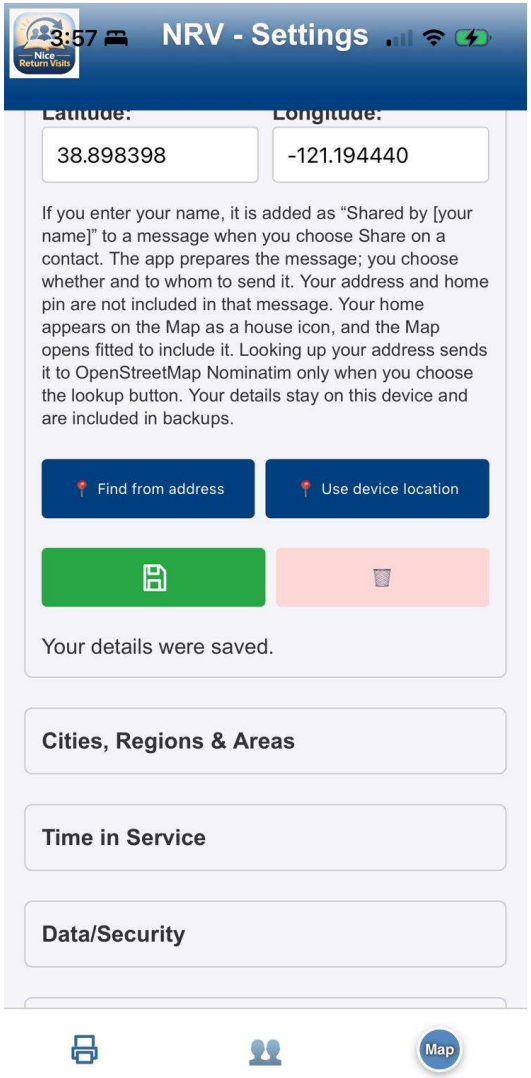

Step 11. Enter the default state and city.

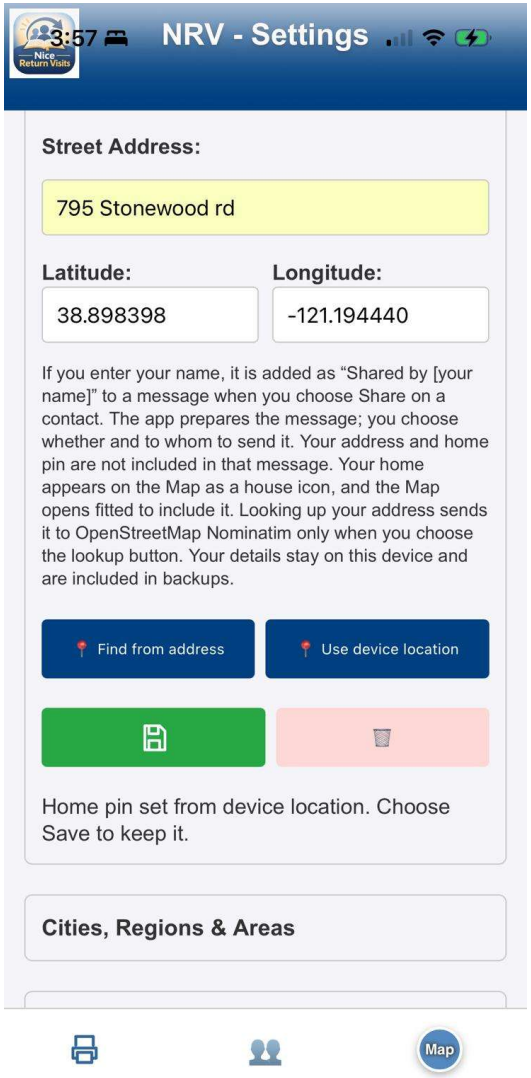

Step 12. Save the default settings and wait for confirmation.

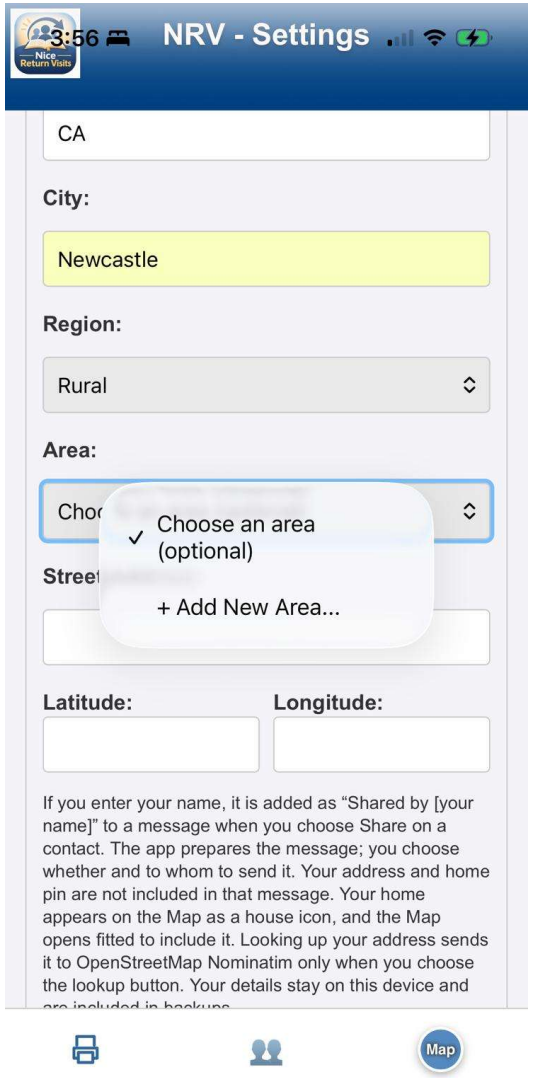

Step 13. Review the empty installed-copy Contacts screen.

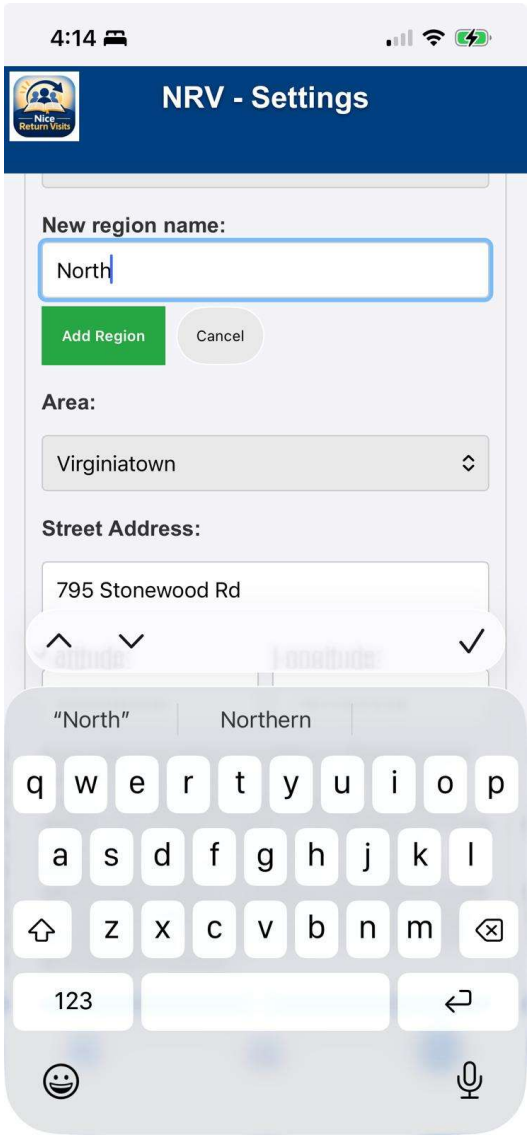

Step 14. Confirm Your Details have been saved.

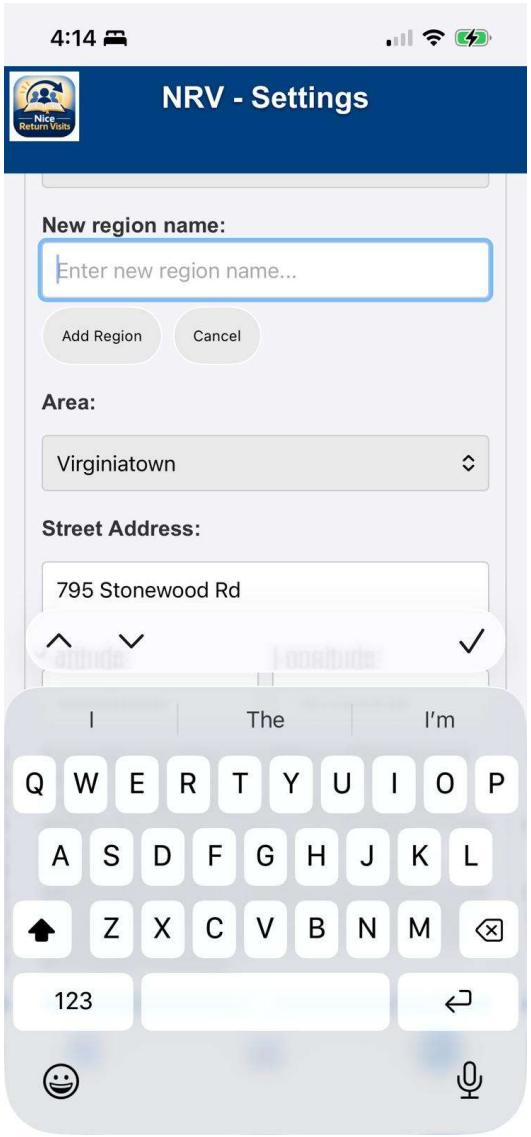

Step 15. Use Device Location when physically at the location.

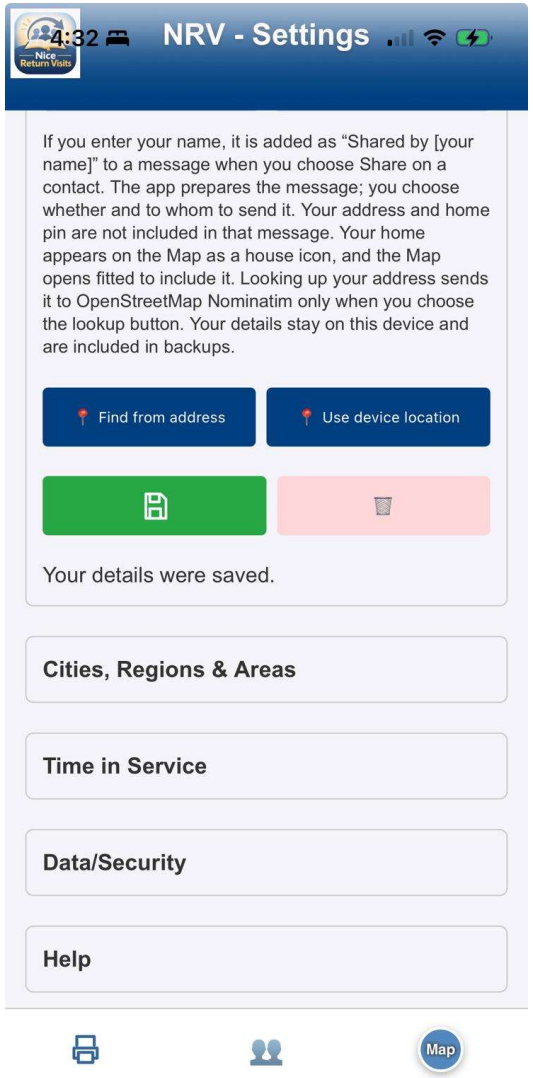

Step 16. Select an existing Area or add a new Area.

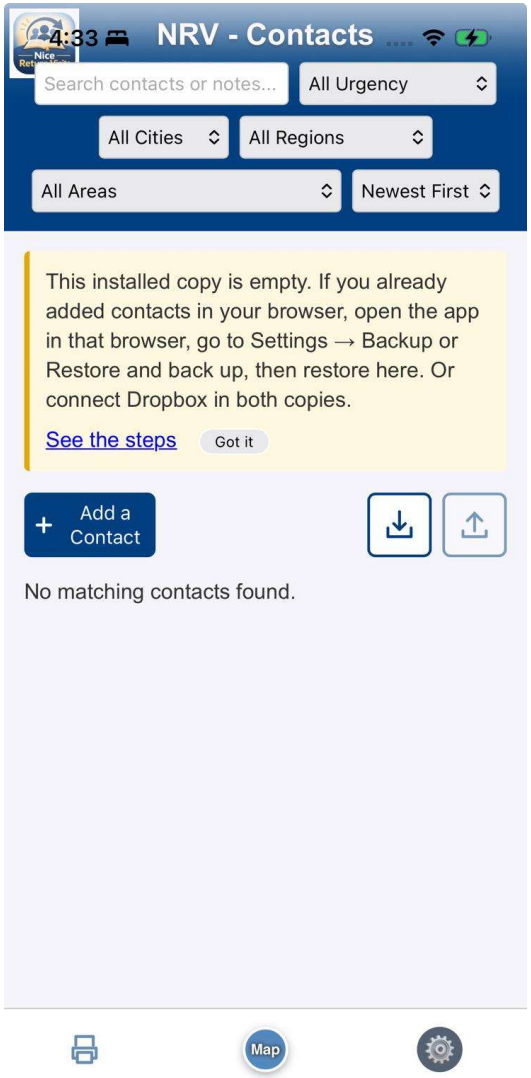

Step 17. A new Region waiting to be added highlights the Add Region button.

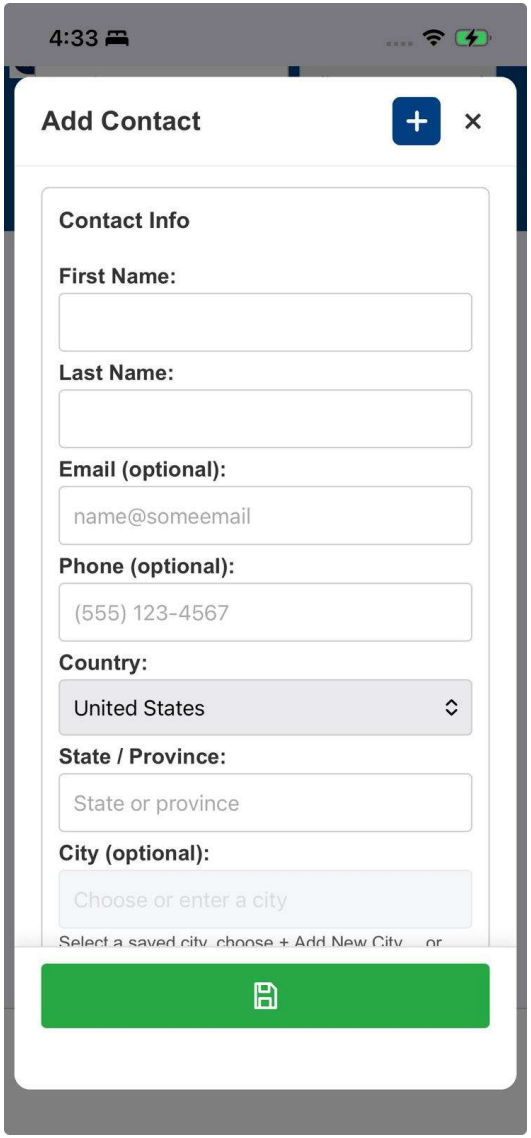

Step 18. After the Region is added, the button returns to normal.

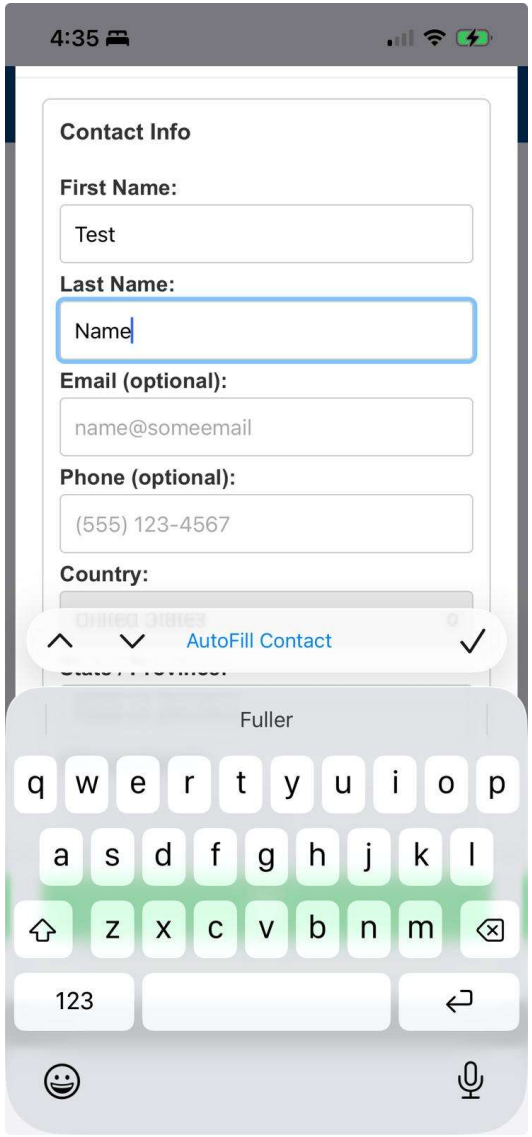

Step 19. Save Your Details before leaving setup.

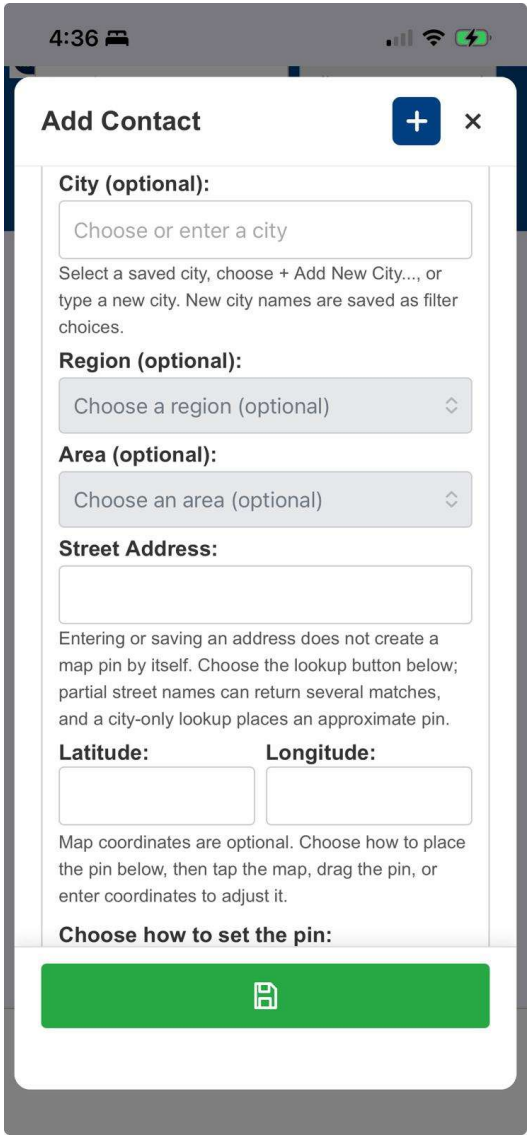

Step 20. Open Contacts when setup is complete.

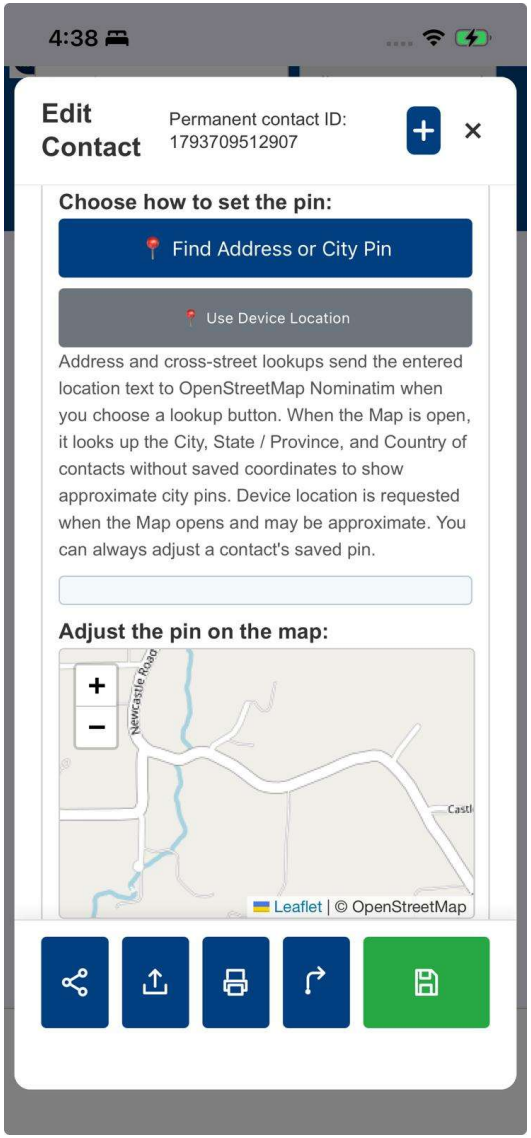

Step 21. Select Add a Contact.

Step 22. Review the blank contact form.

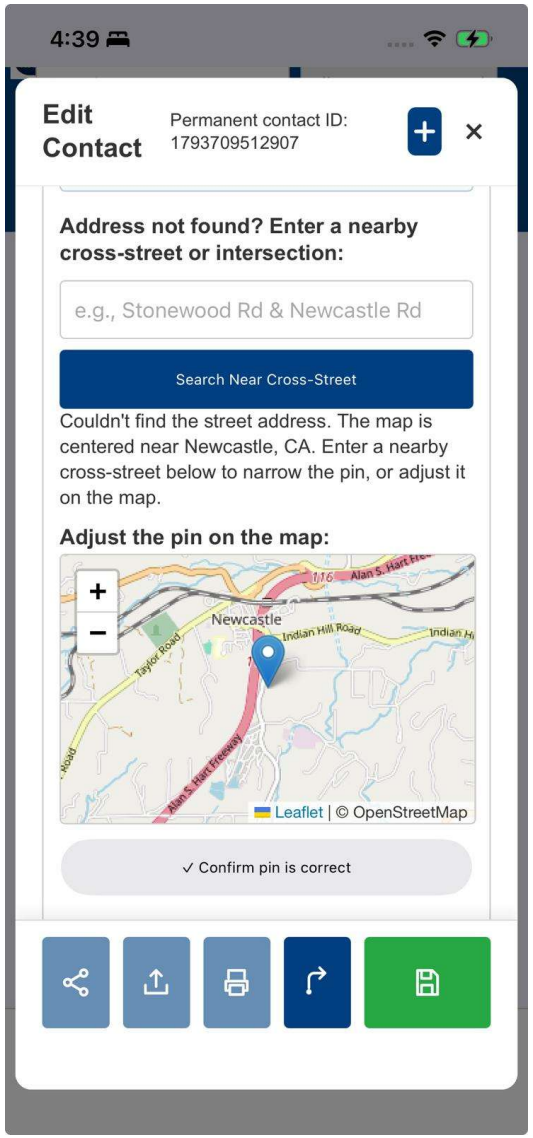

Step 23. Enter the contact first and last name.

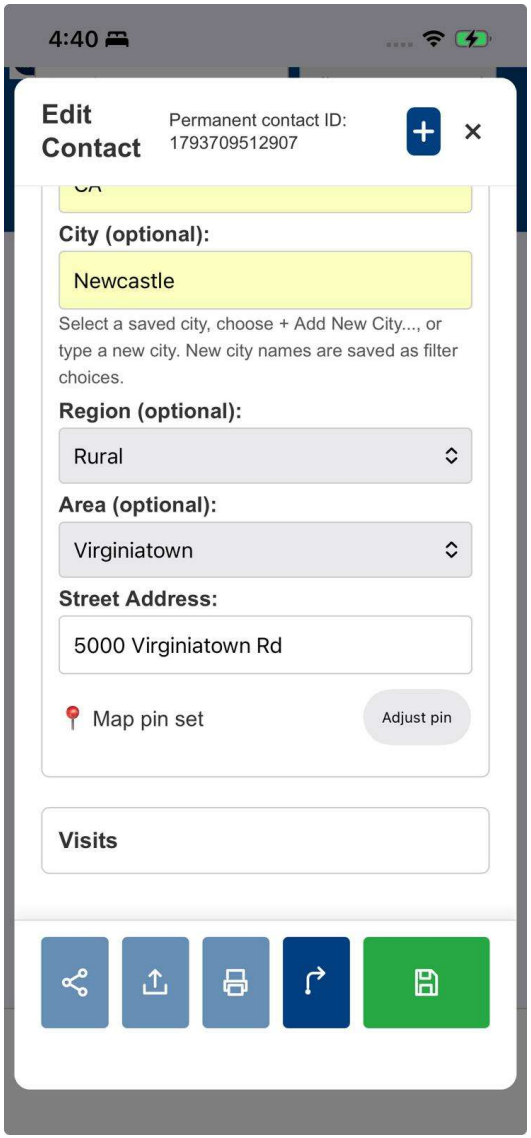

Step 24. Complete the location and address fields.

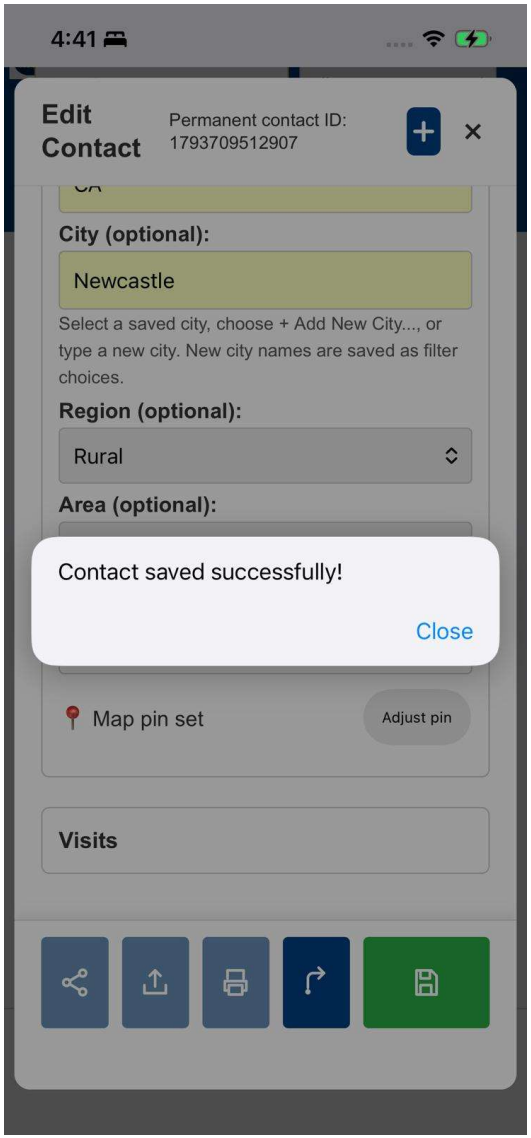

3. Contacts and Map Pin Setup

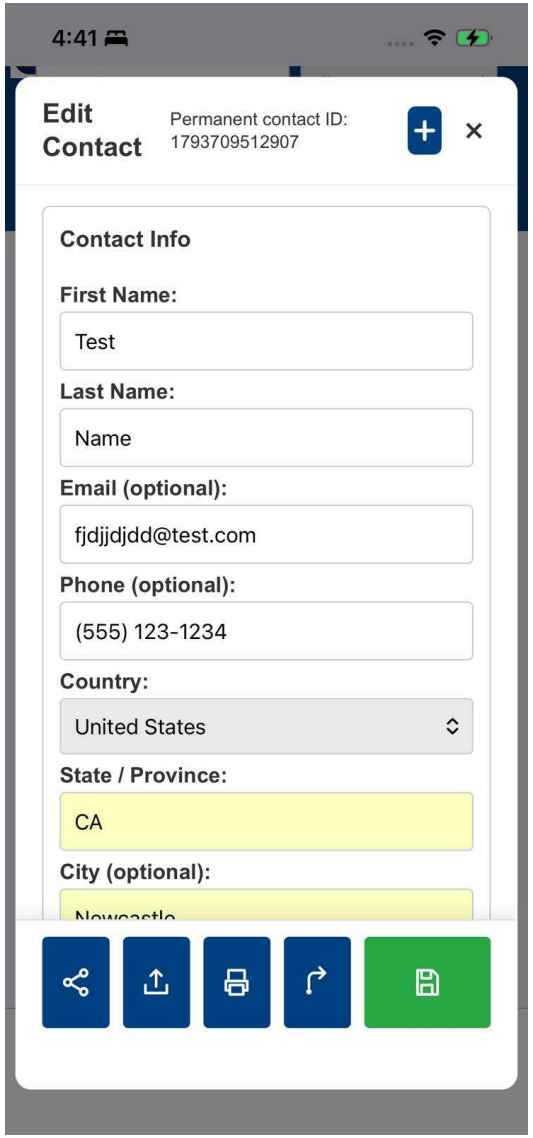

Step 25. Choose how to set the map pin.

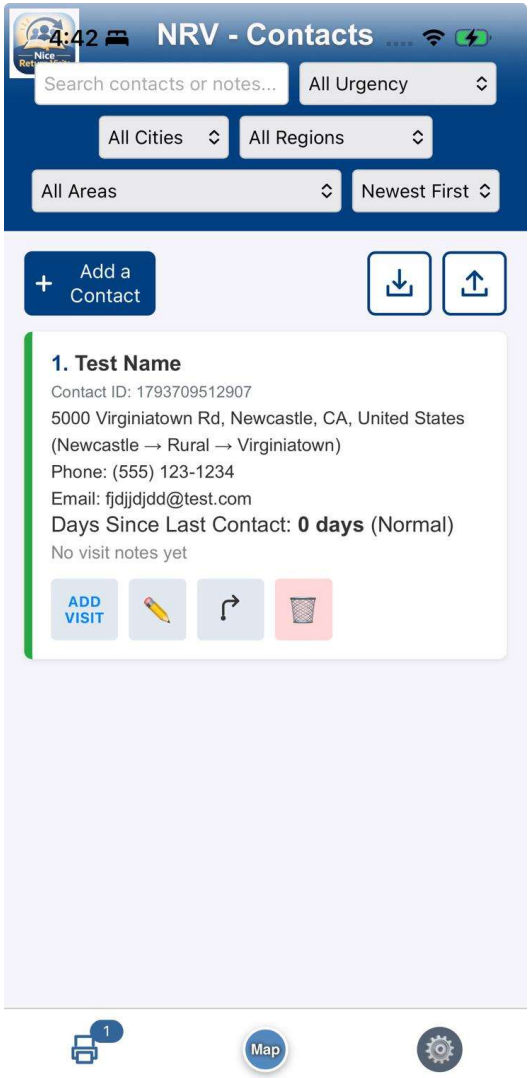

Step 26. If the address is not found, adjust or confirm the pin.

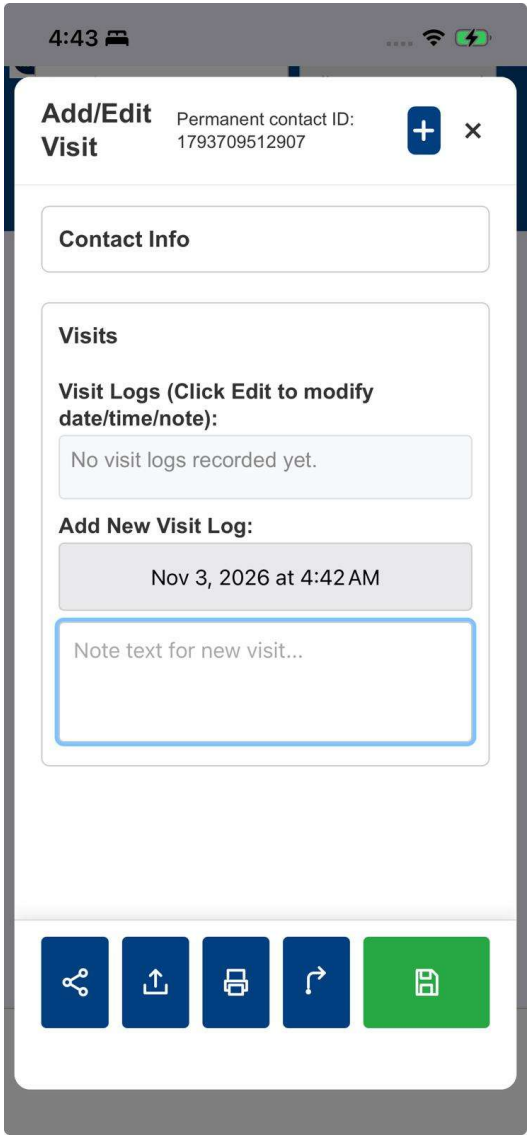

Step 27. Confirm the contact map pin is set correctly.

Step 28. Save the contact.

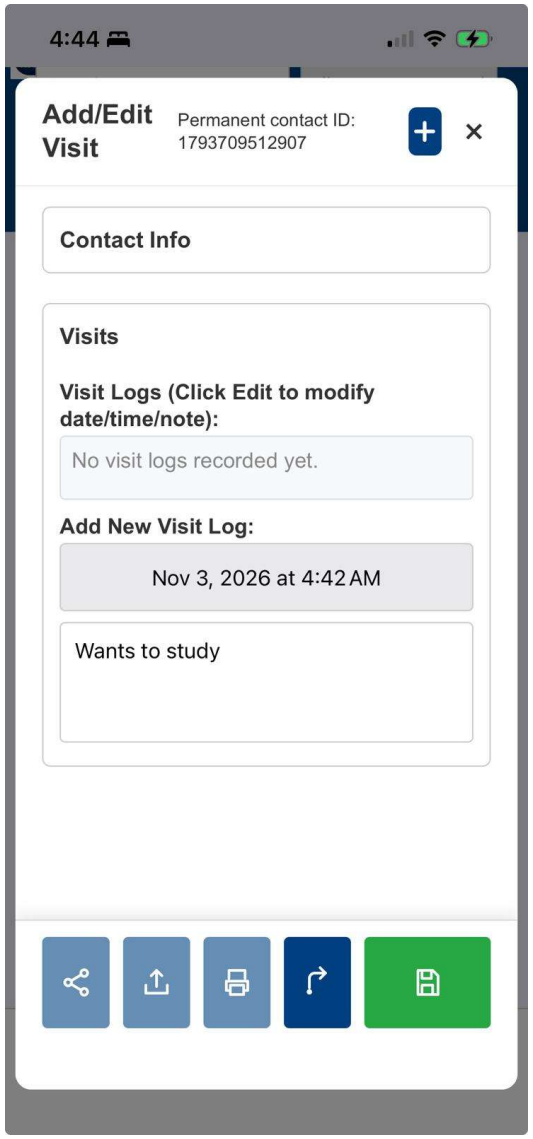

Step 29. Review the saved contact details.

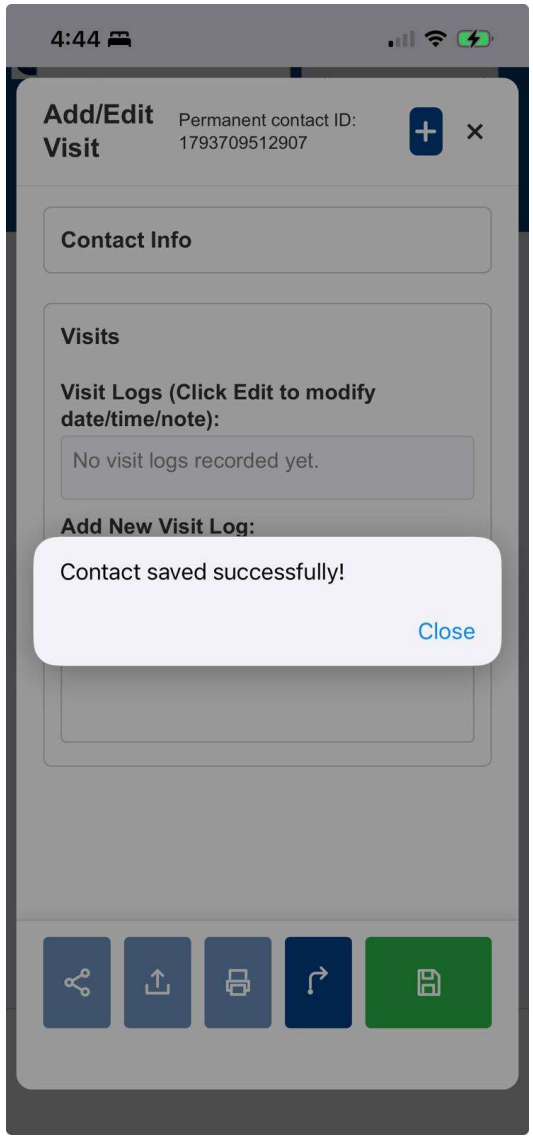

Step 30. Use the actions available on the saved contact card.

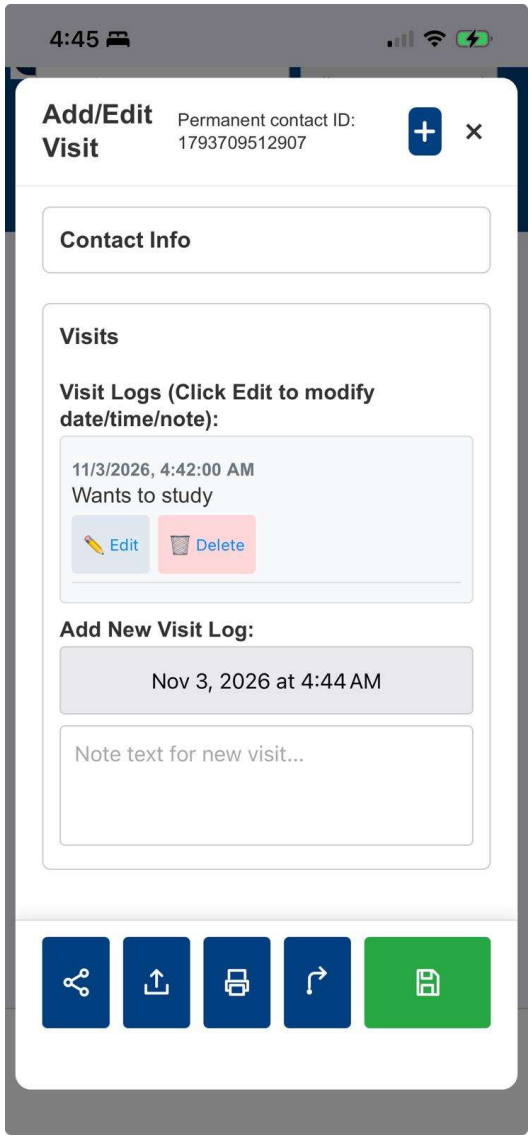

4. Record a Visit

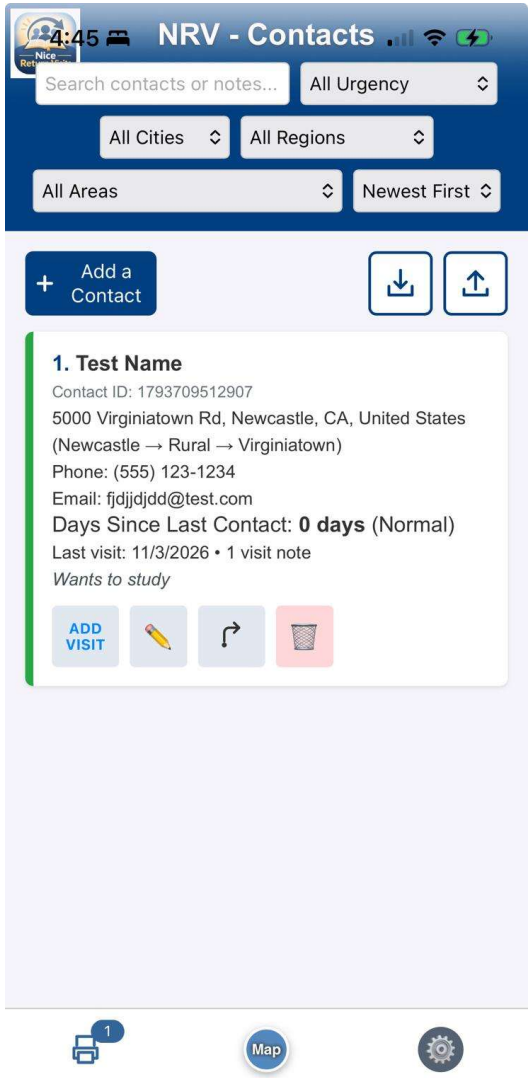

Step 31. Open Add Visit.

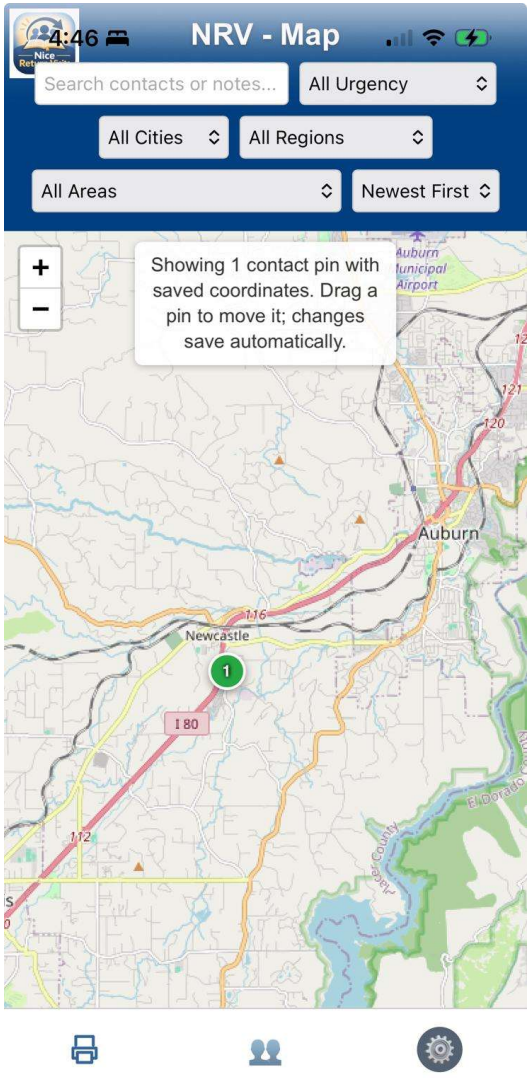

Step 32. Enter the visit note.

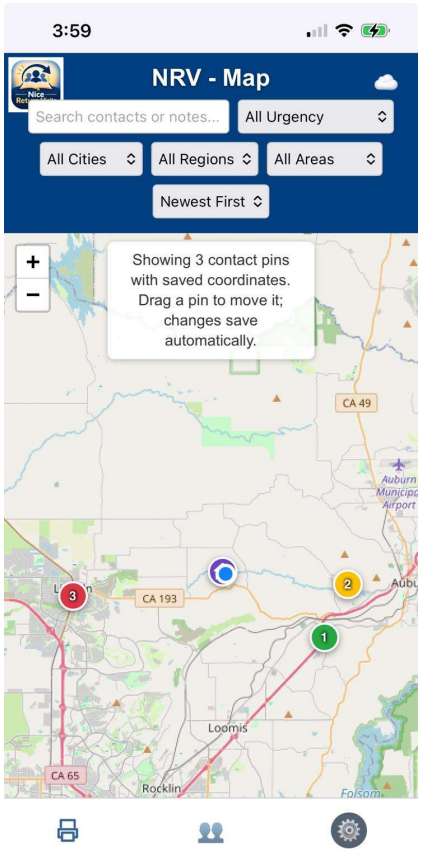

Step 33. Save the visit and review the confirmation.

Step 34. Review the saved visit log and Edit/Delete controls.

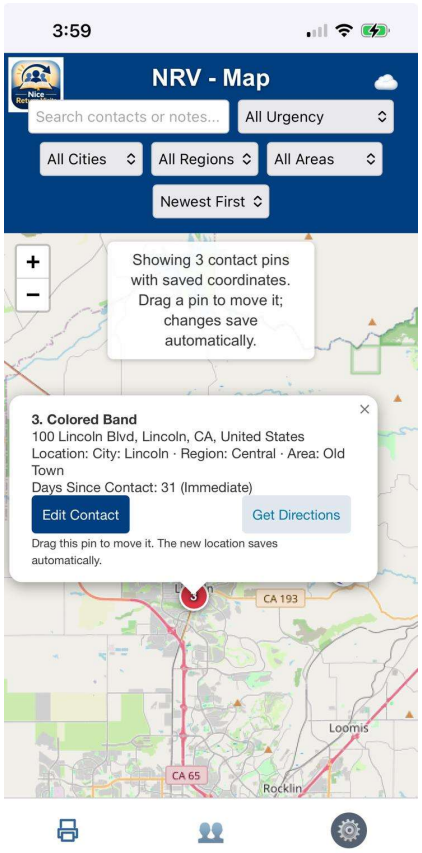

Step 35. Return to the contact card to see the recorded visit.

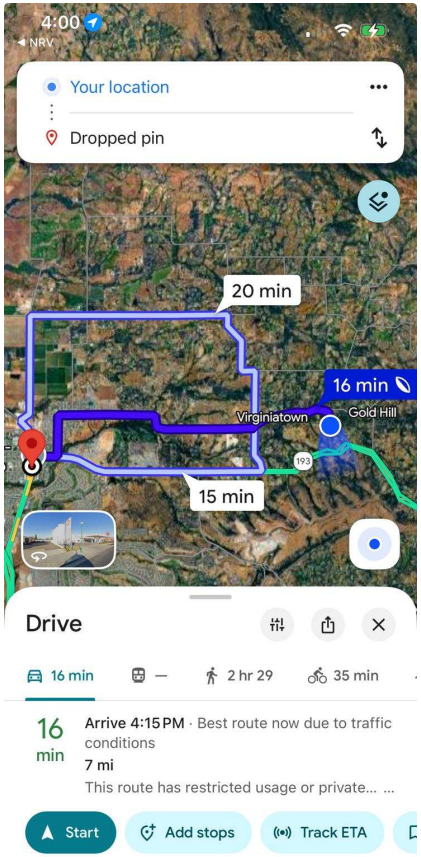

Step 36. Open Map to view the contact pin and filters.

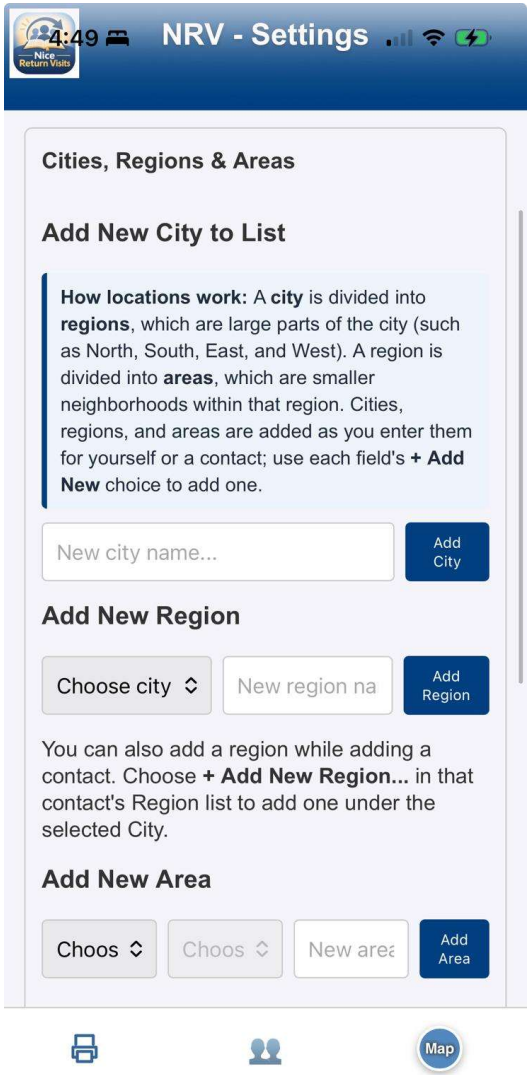

5. Map and Directions

Step 37. Tap the contact pin for details.

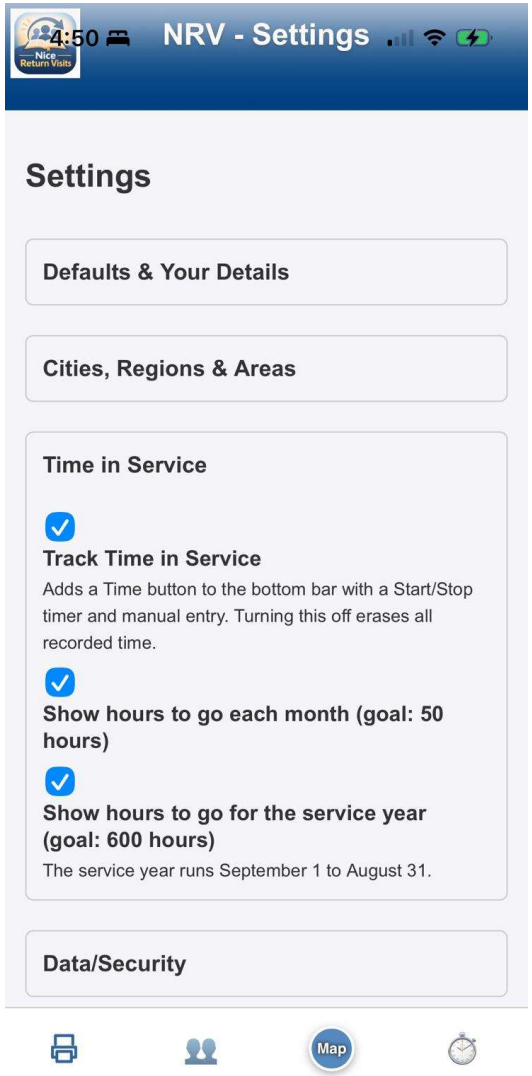

Step 38. Choose Get Directions when directions are needed.

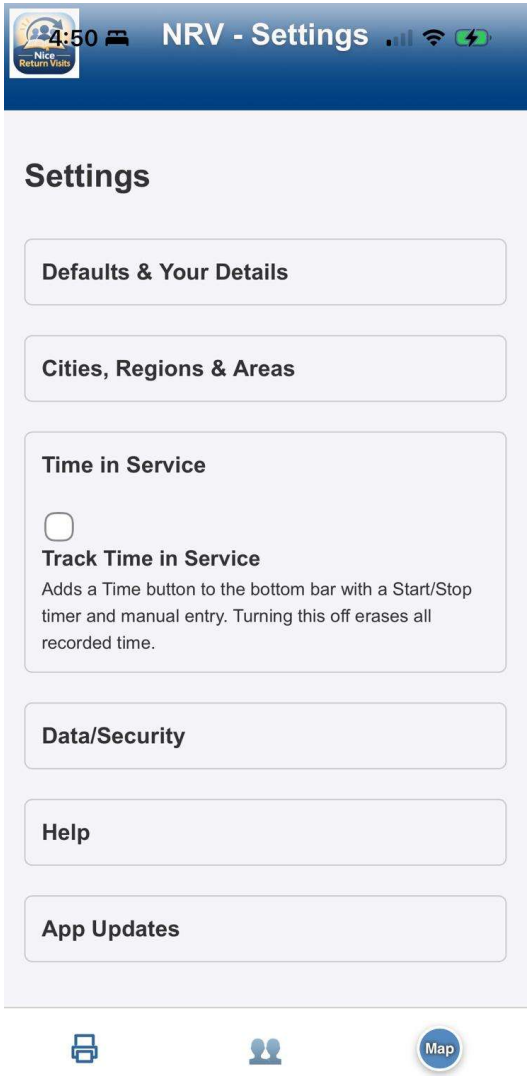

Step 39. Return to NRV after the directions screen.

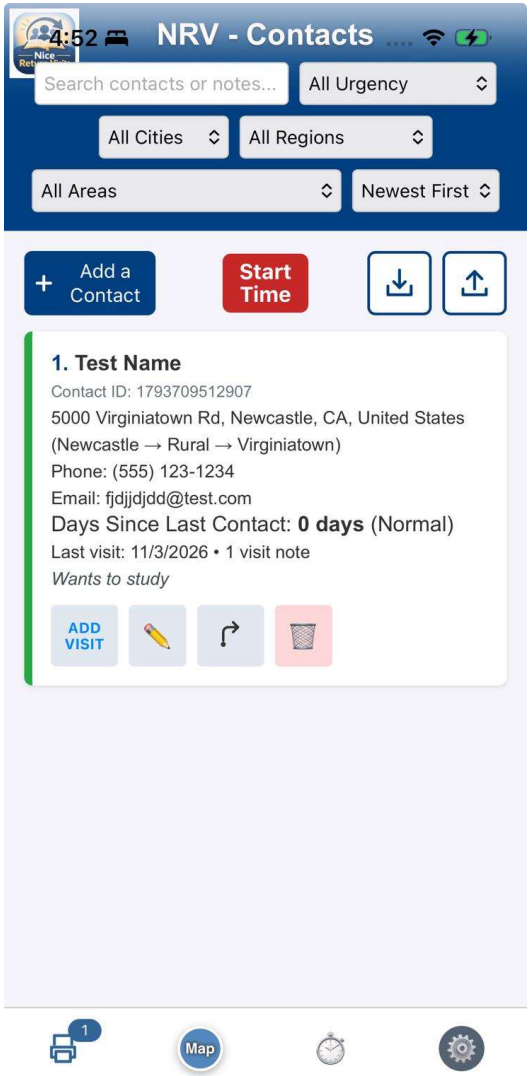

6. Settings and Optional Features

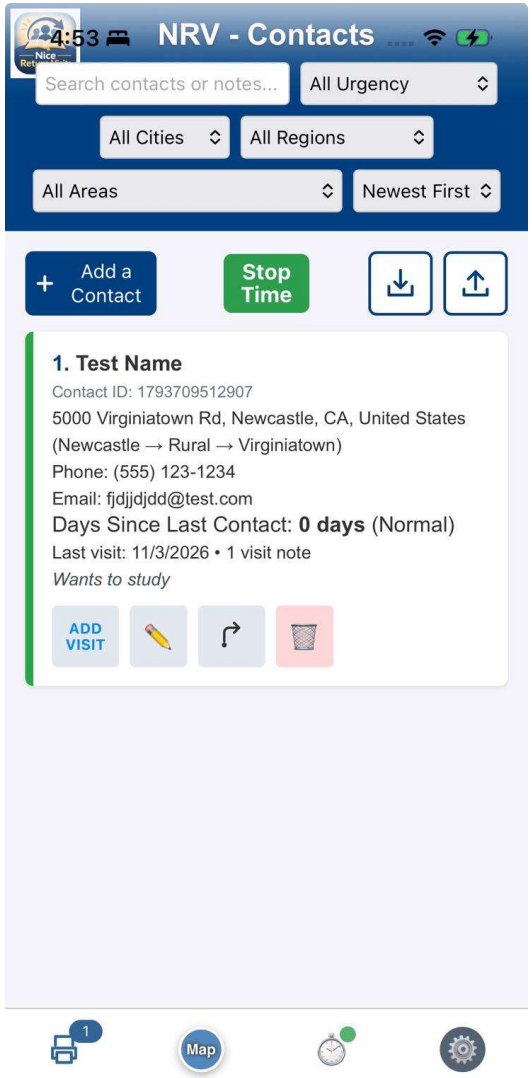

Step 40. Open Settings.

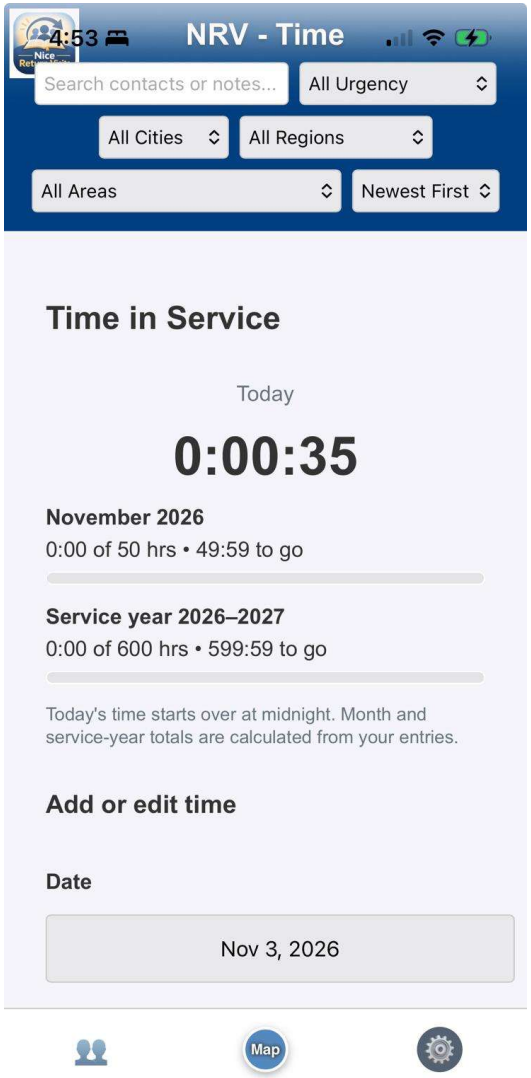

Step 41. Manage Cities, Regions & Areas as needed.

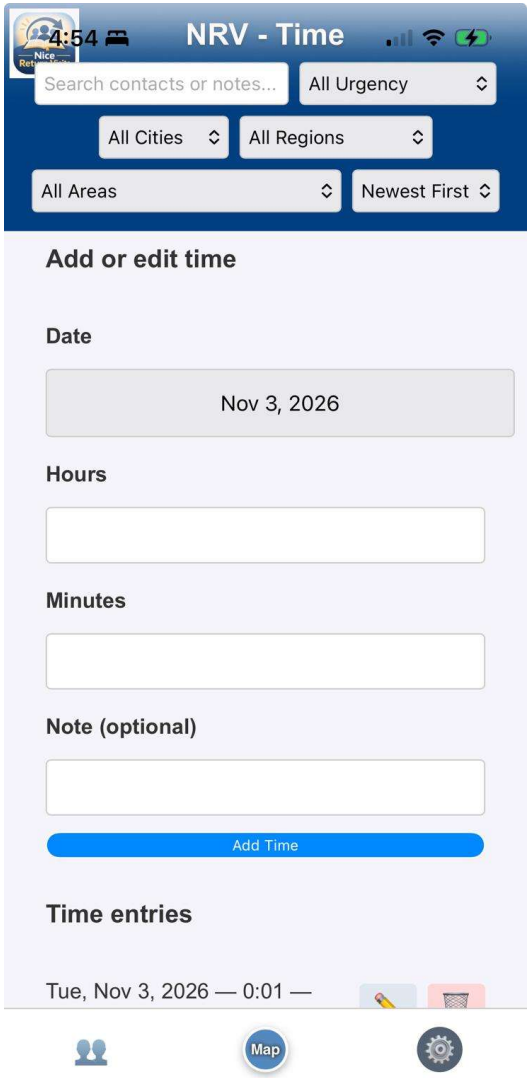

Step 42. Time in Service opens disabled by default.

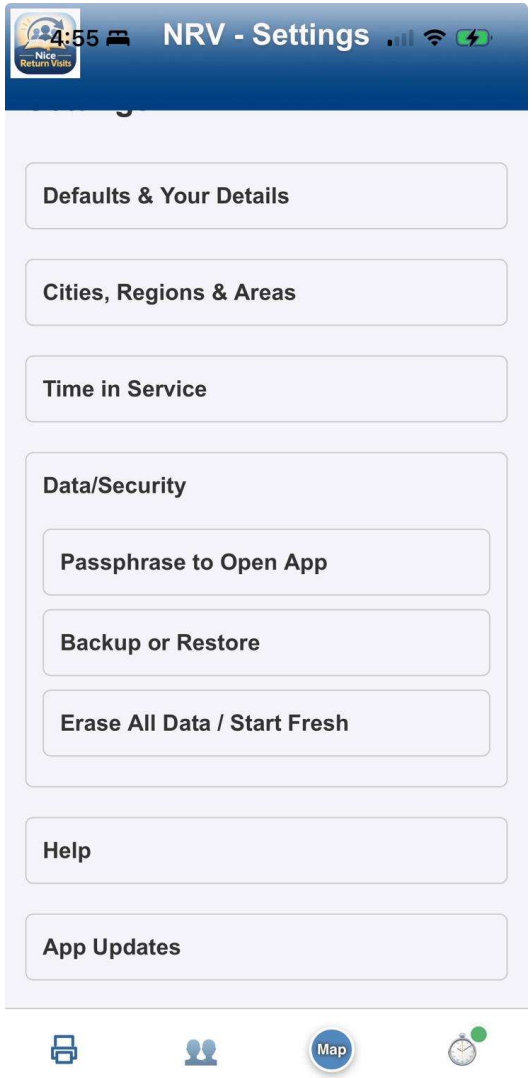

Step 43. Enable Time in Service only if you want to track time.

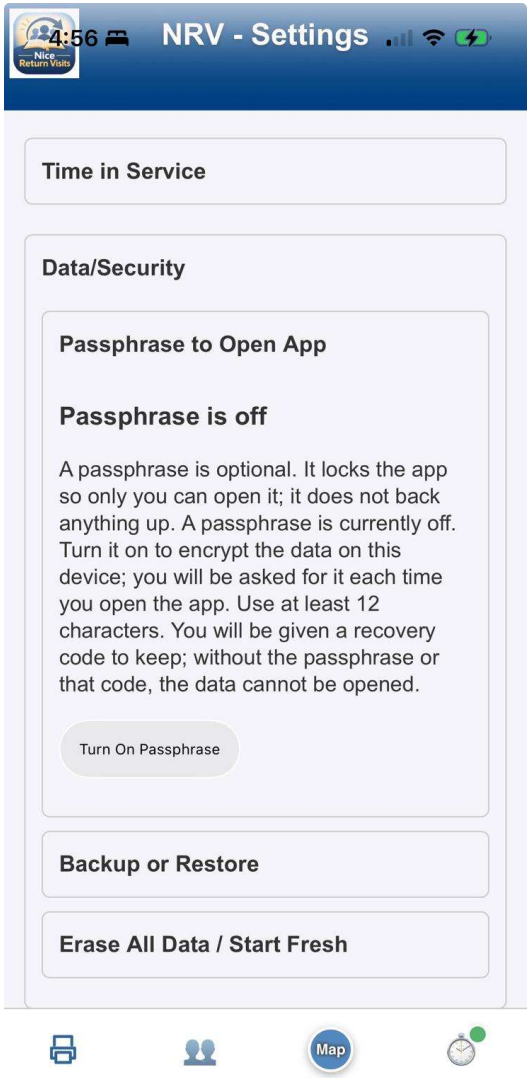

Step 44. With tracking enabled, Contacts shows Start Time.

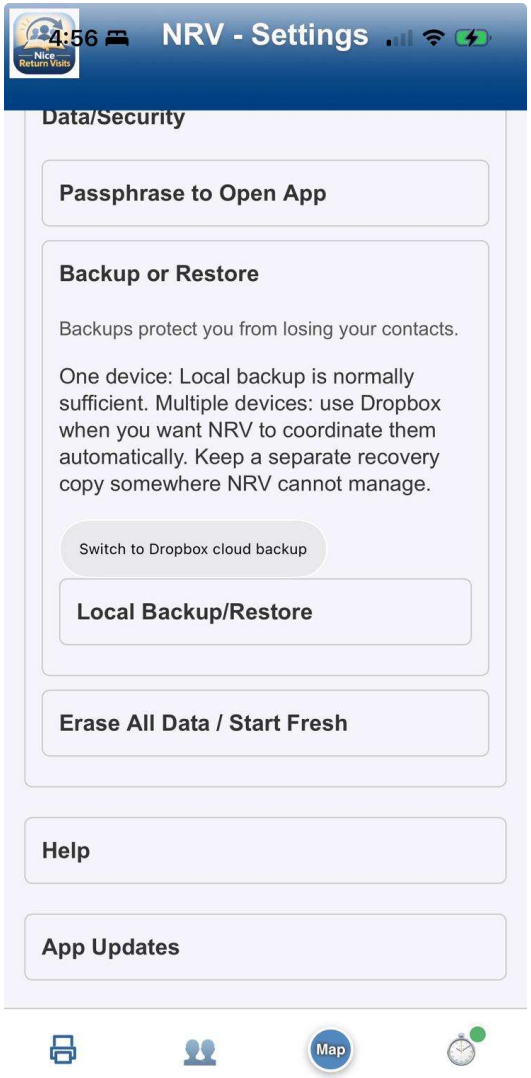

Step 45. While time is running, Stop Time is displayed.

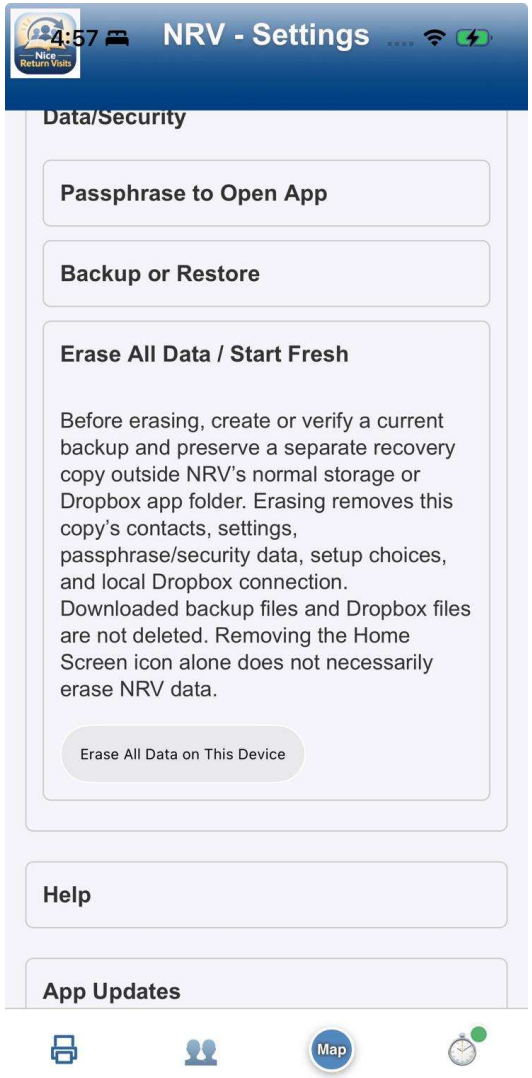

Step 46. Use the stopwatch to view tracked time and goals.

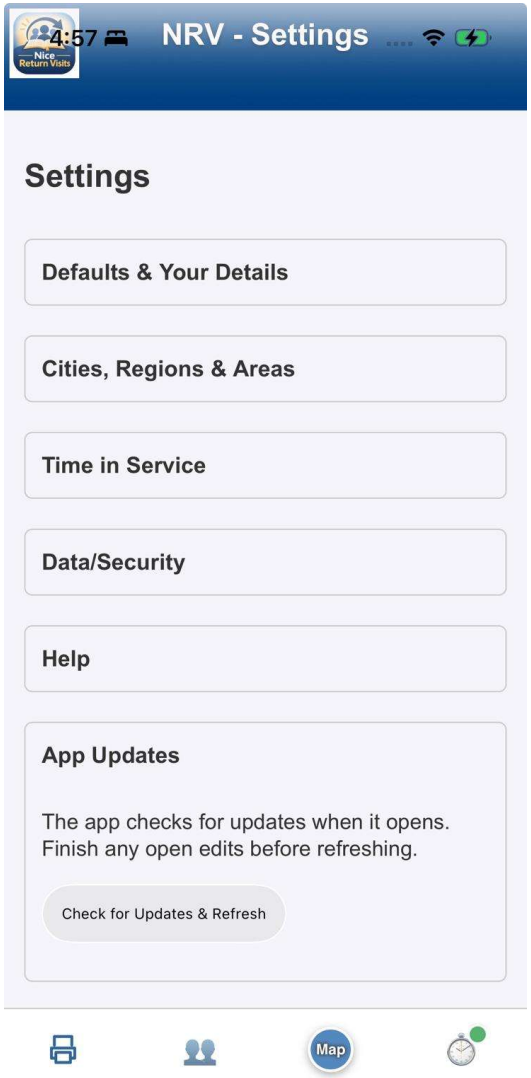

Step 47. Add or edit time manually when needed.

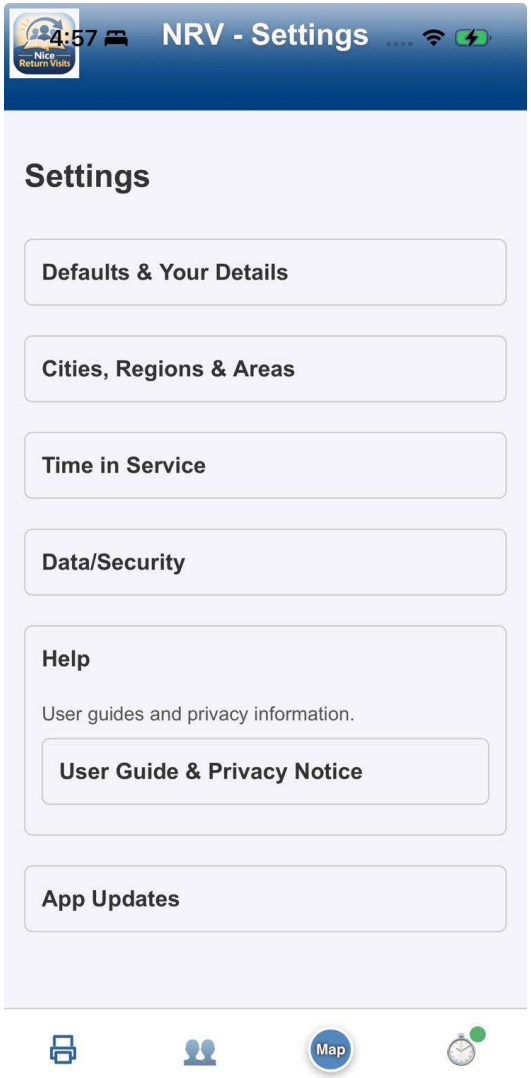

Step 48. Open Data/Security to review optional security tools.

Step 49. Passphrase protection is optional.

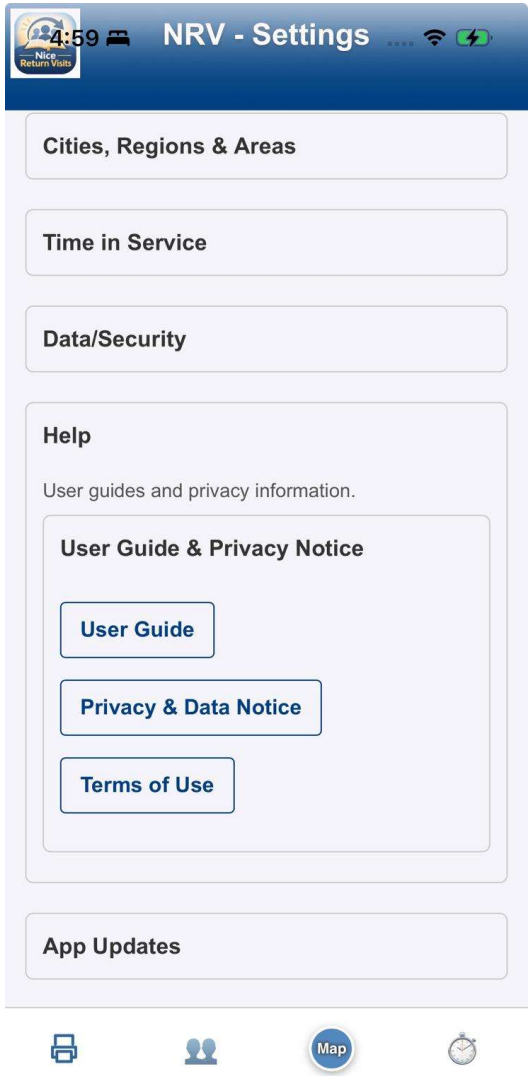

Step 50. Use Backup or Restore to protect or transfer NRV data.

Step 51. Erase All Data / Start Fresh is a destructive recovery function.

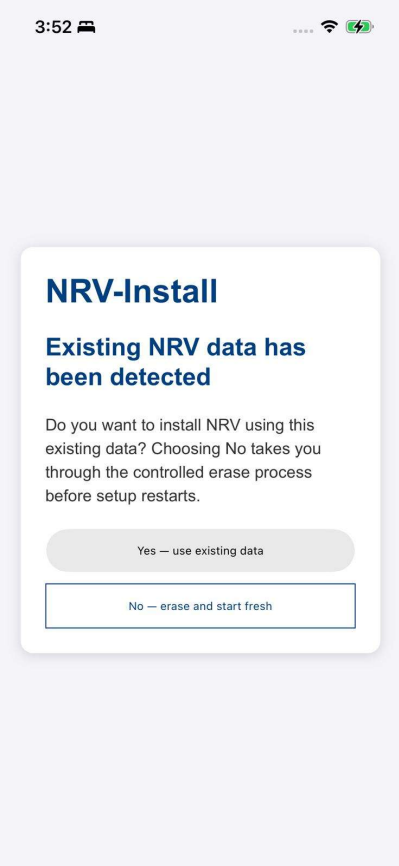

7. App Updates and Help

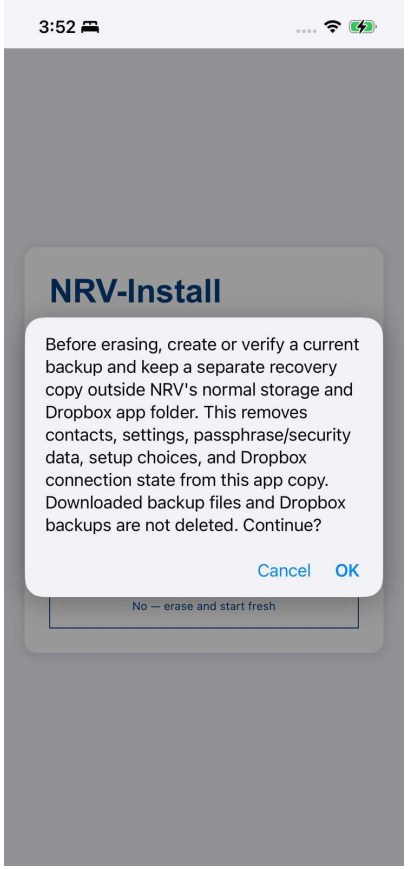

Step 52. Use App Updates only after finishing open edits.

8. Existing Data / Start Fresh

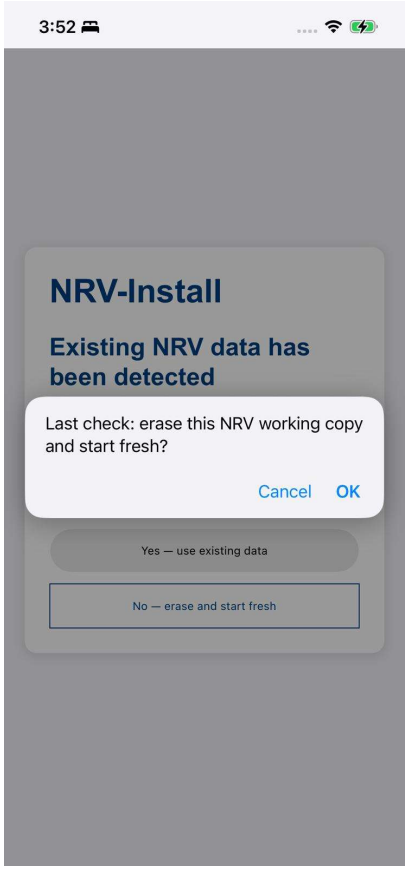

Use this path only when NRV detects existing data and you intentionally want to start fresh. The warnings are designed to protect recoverable data before the working copy is erased.

Step 53. Existing NRV data has been detected. Choose Yes to use the existing data, or No to begin the controlled erase-and-start-fresh process.

Step 54. Before erasing, verify a current backup and keep a separate recovery copy outside NRV's normal storage or Dropbox app folder. Select OK only to continue the controlled erase process.

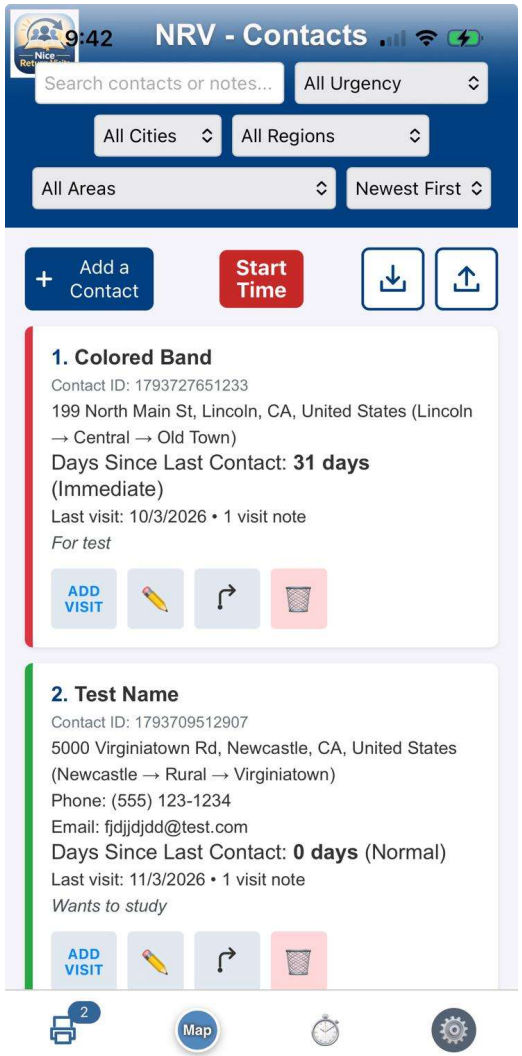

Step 55. At the final check, confirm the erase only if you intentionally want to erase this NRV working copy and start fresh.

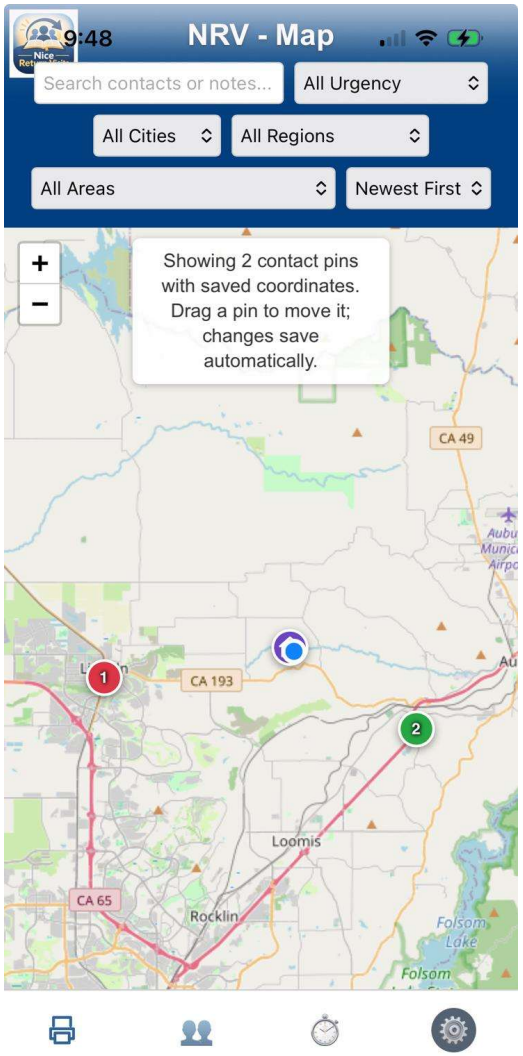

Important: Downloaded backup files and Dropbox backups are not deleted by this working-copy erase, as stated in the warning shown in Step 54.

9. Contacts: Urgency, Pins, Filters, and Sorting

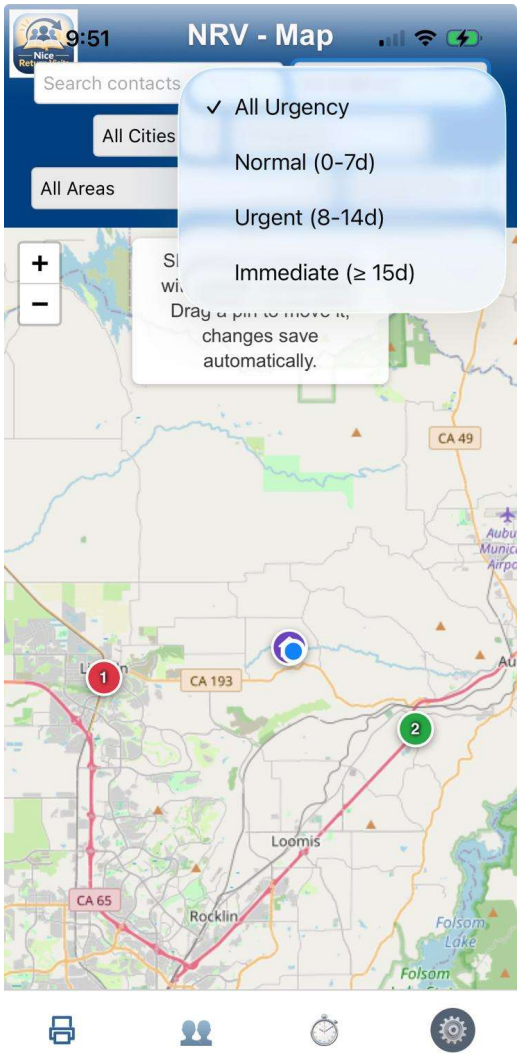

This section explains how urgency colors, map-pin numbers, location fields, filters, and last-visit sorting work together on the Contacts and Map screens.

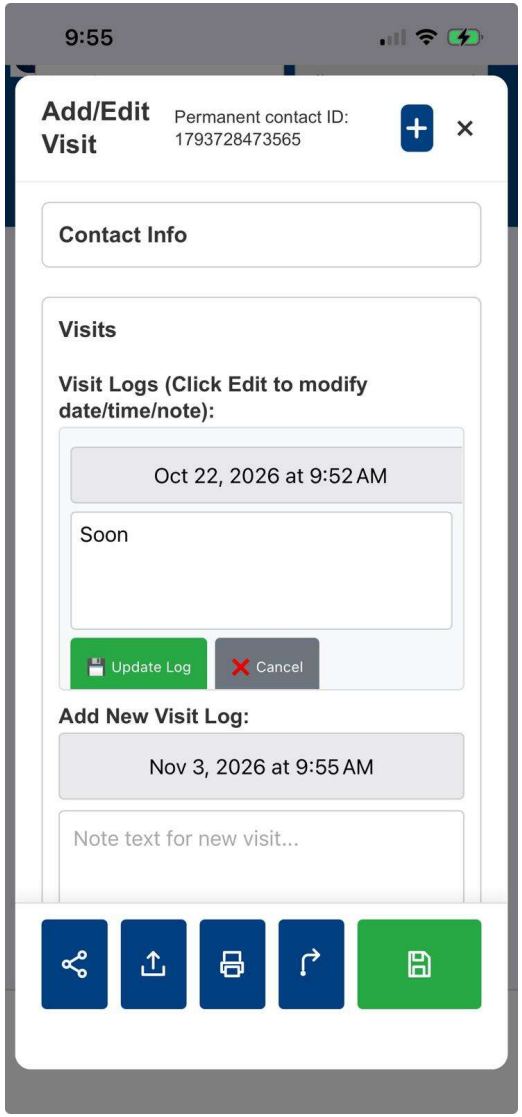

Step 56. Urgency is shown by the colored band at the left of each contact card.

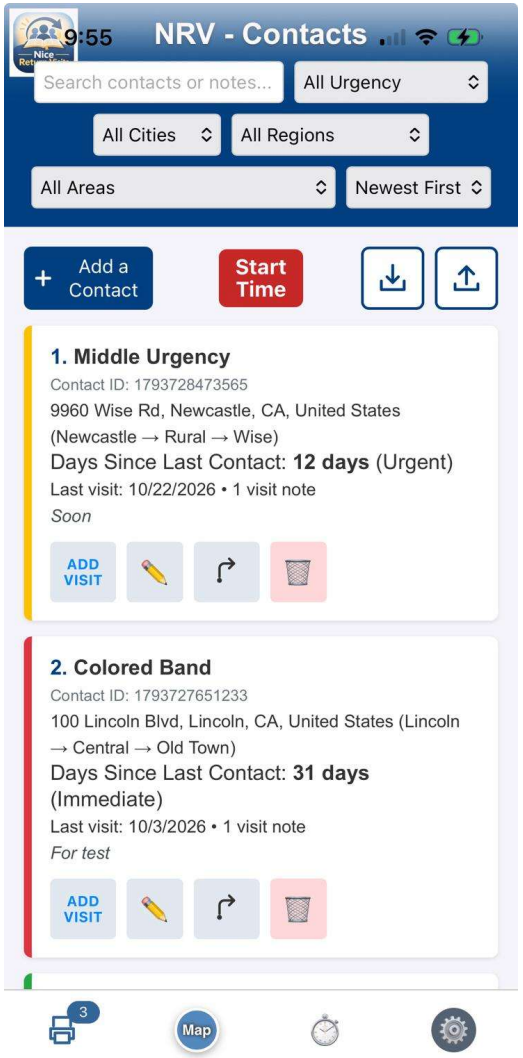

Step 57. On the Map, contact-pin colors correspond to the contact urgency colors. The device-location marker is separate.

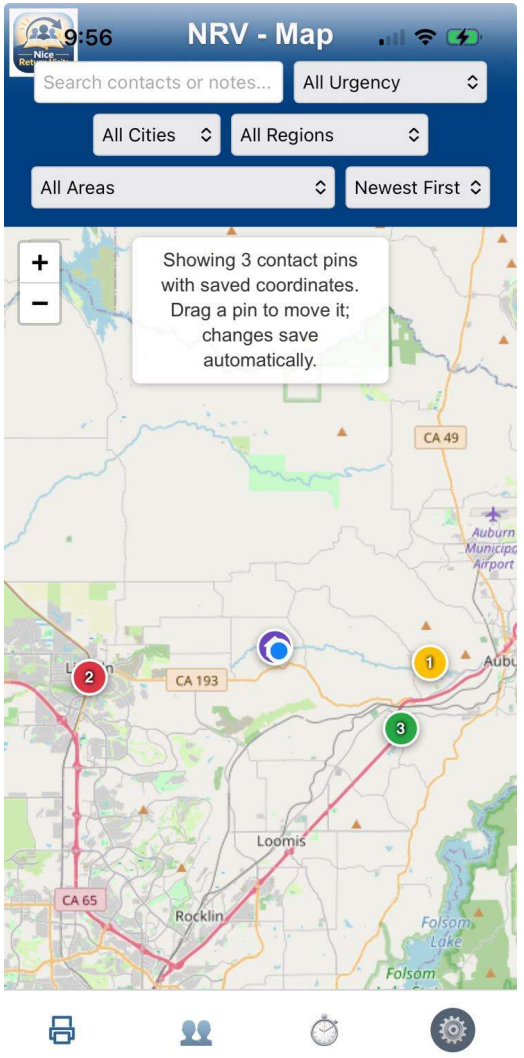

Step 58. Urgency ranges are Normal: 0–7 days, Urgent: 8–14 days, and Immediate: 15+ days since the last contact.

Step 59. When editing a saved visit, review the visit fields and use Update Log to save the edit.

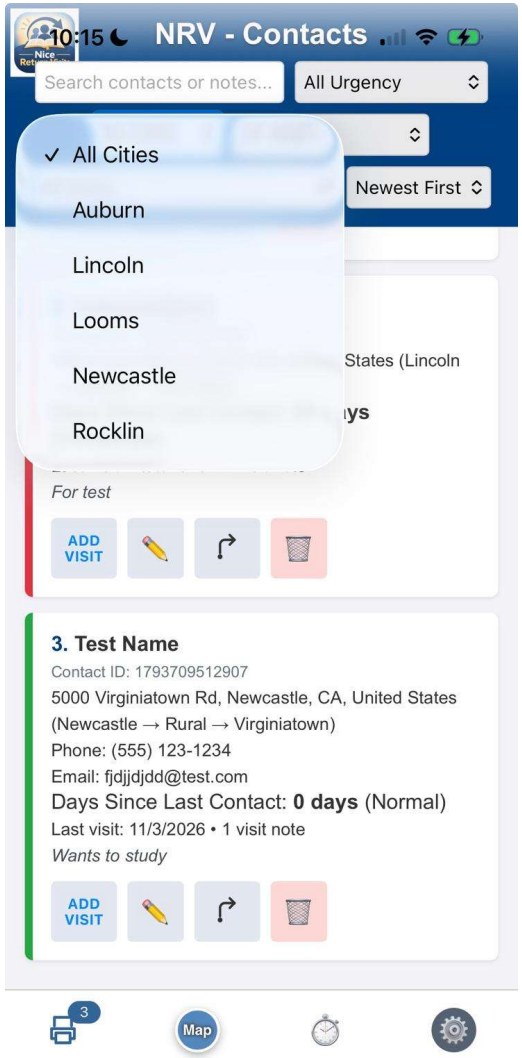

Step 60. Contact cards use the urgency band to distinguish Urgent and Immediate contacts at a glance.

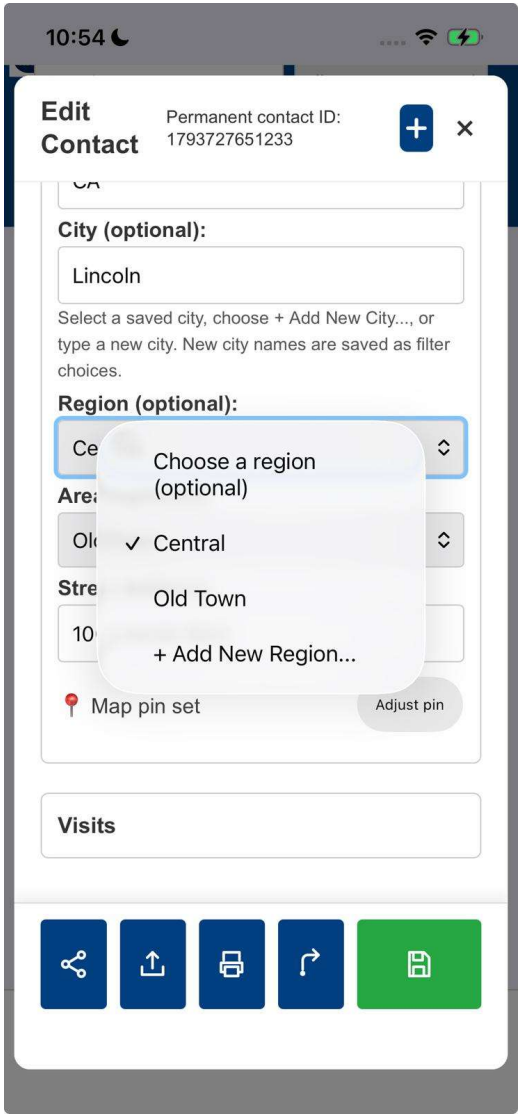

Step 61. Map pin numbers match the temporary display number shown on the corresponding contact card.

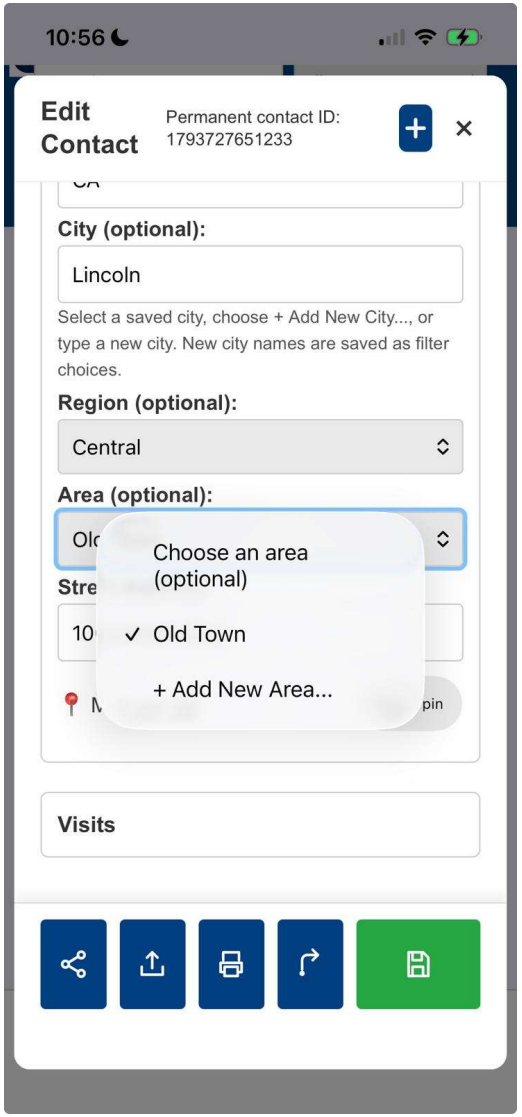

Map-pin numbering note: The number on a map pin matches the temporary display number beside the corresponding contact card. It is not the contact's permanent Contact ID. Display numbers change with the contacts currently shown or filtered. If five contacts are displayed, the visible cards and matching map pins are numbered 1–5.

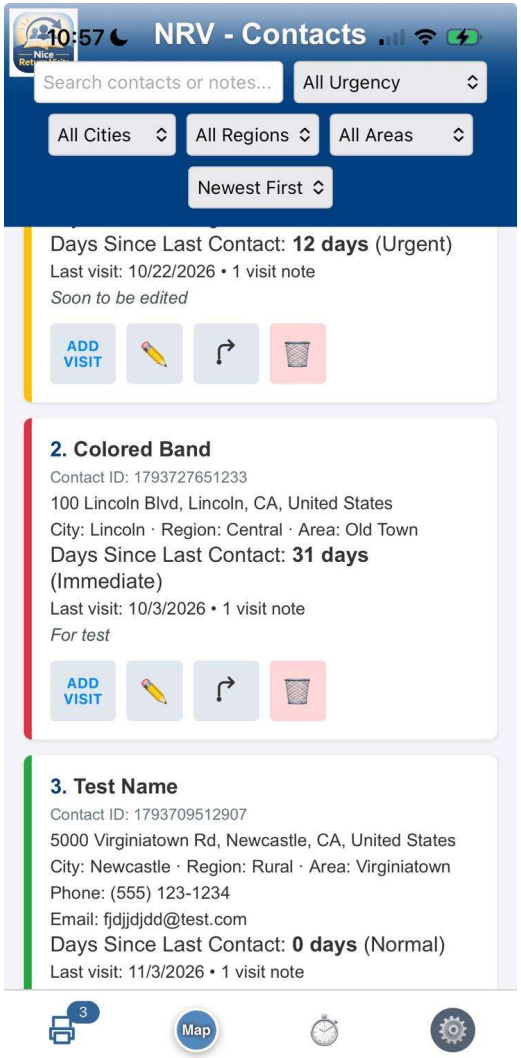

Step 62. Use the City filter to limit the displayed contacts to a selected city.

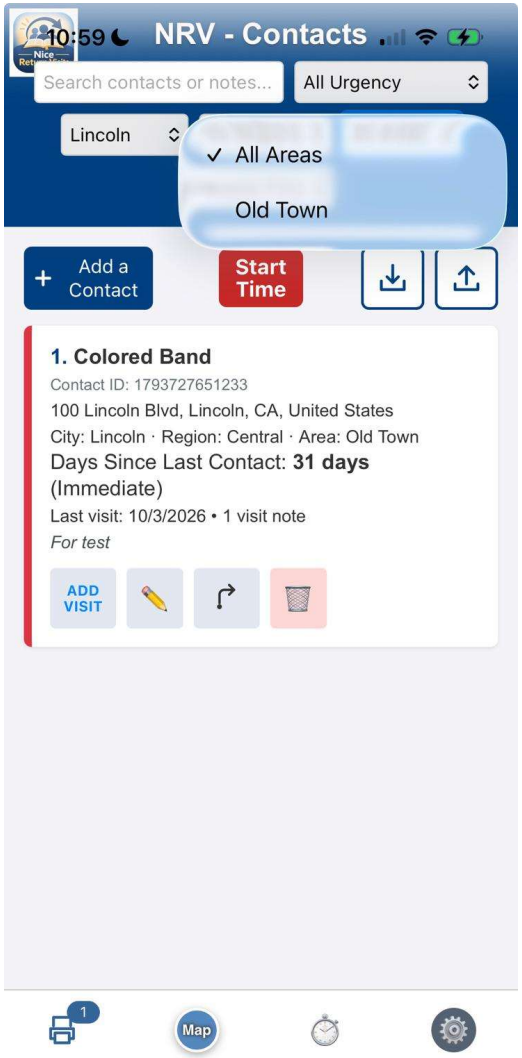

Step 63. After a City is selected in a contact, Region choices are shown as plain names without adding the City name.

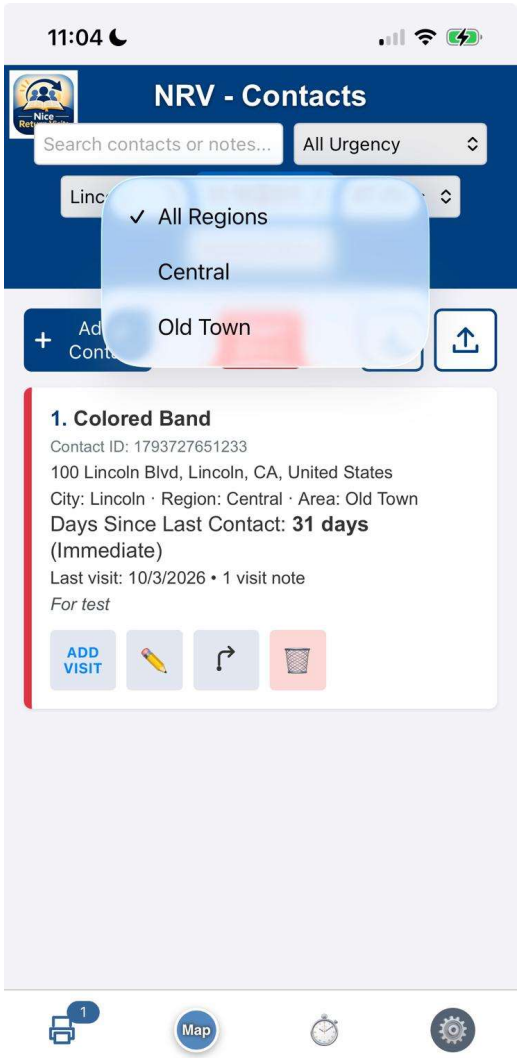

Step 64. Area choices likewise use the selected City as context while displaying only the Area name.

Step 65. Contact cards show the location as labeled City, Region, and Area fields rather than as an ownership hierarchy.

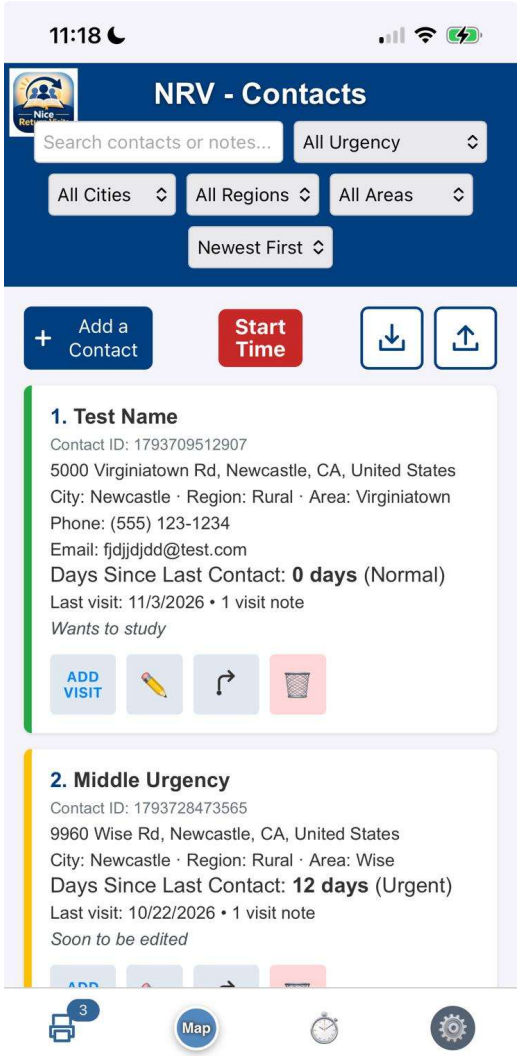

Step 66. With a City selected, the Contacts Area filter lists the applicable Area names for that City.

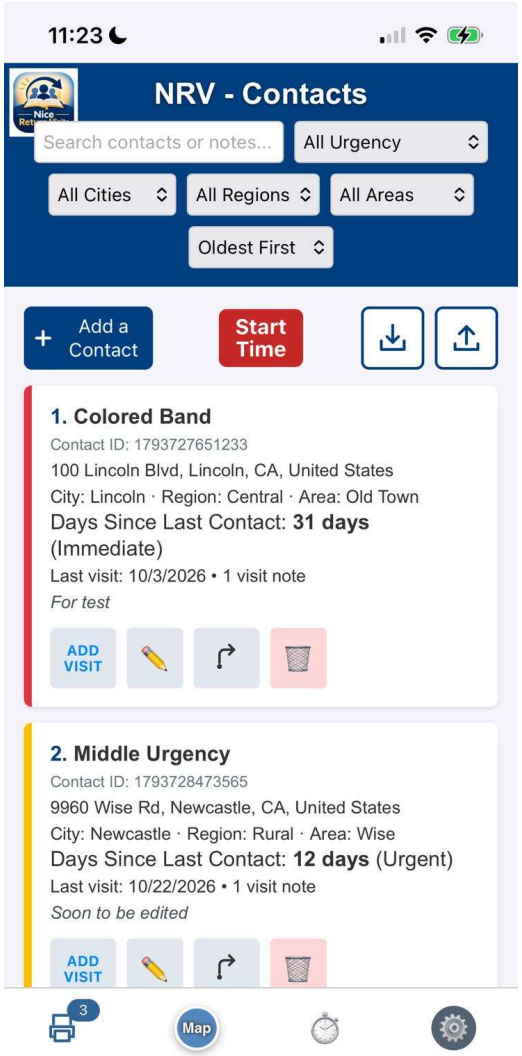

Step 67. With a City selected, the Contacts Region filter lists the applicable Region names for that City.

Region and Area remain independent. With a City selected, either filter can be used without selecting the other. Names remain unqualified, such as North or Old Town, rather than North (Lincoln).

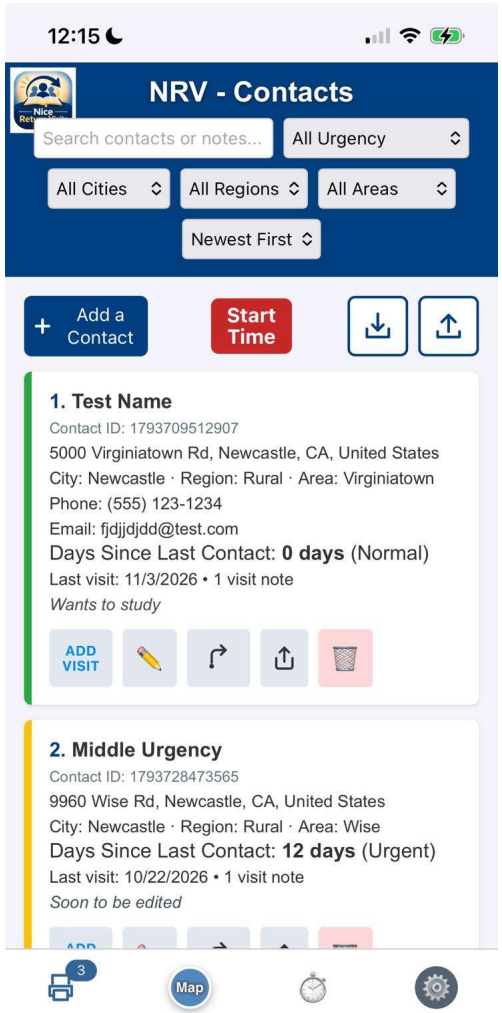

Step 68. Newest First sorts contacts by the most recent last-visit date.

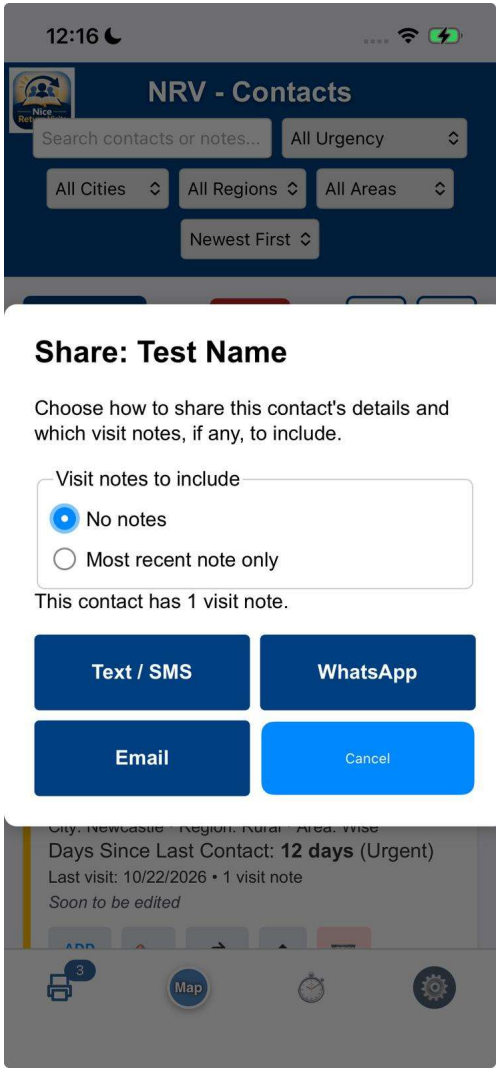

Step 69. Oldest First sorts contacts by the oldest last-visit date.

10. Contact Actions: Share, Print, and Export

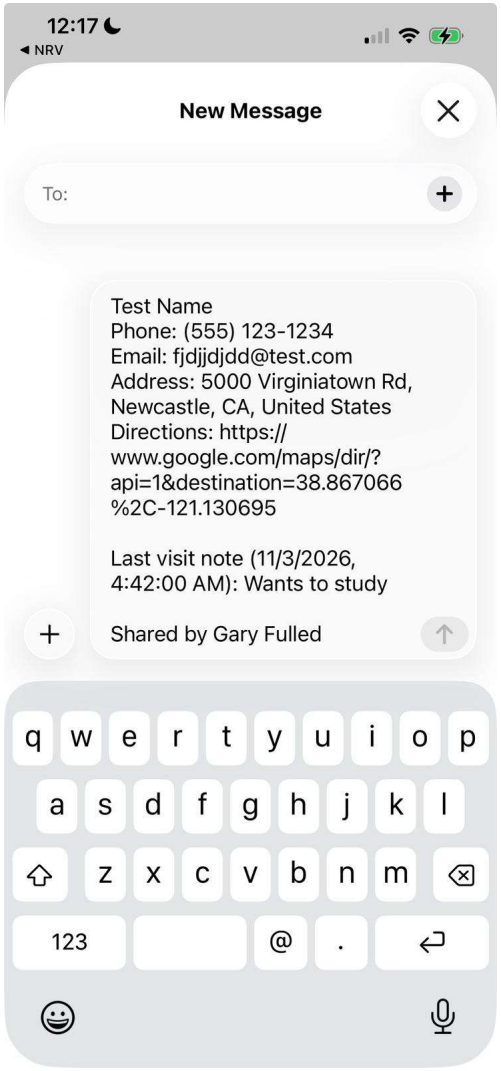

Contact actions let you share, print, or export information without changing the saved contact record. Sharing and exporting prepare content for the selected destination; the user still chooses whether and where to send or save it.

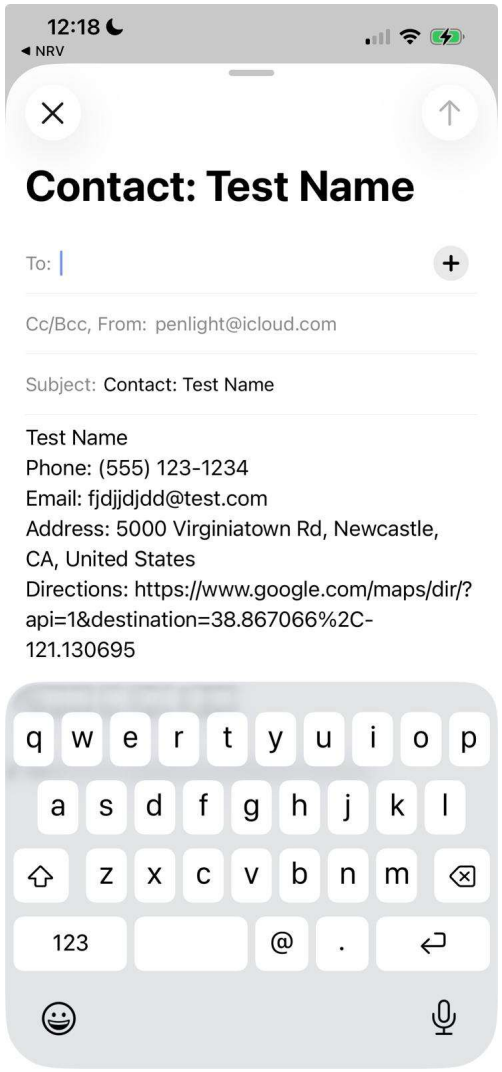

Step 70. Use Share directly from the contact-card action row.

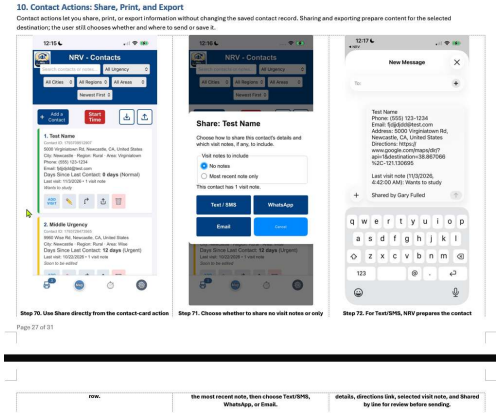

Step 71. Choose the visit-note option and sharing destination.

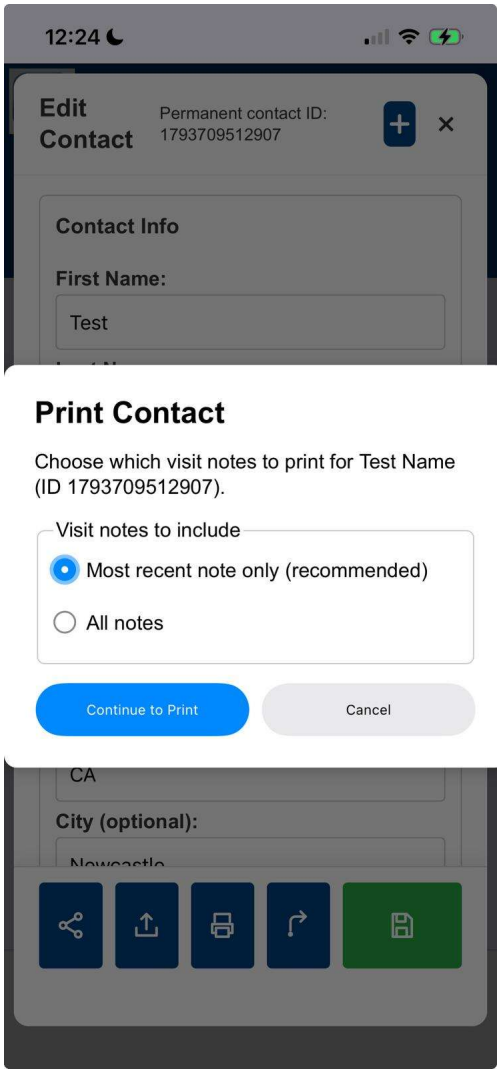

Step 72. Review the prepared Text/SMS message before sending.

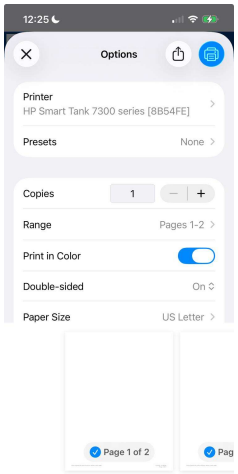

Step 73. Email with No notes omits the visit note.

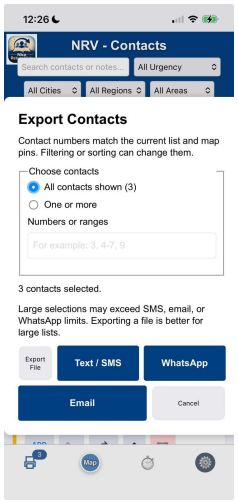

Step 74. Choose the WhatsApp recipient and review before sending.

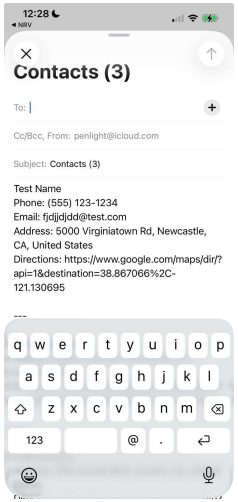

Step 75. Choose the visit notes to include when printing.

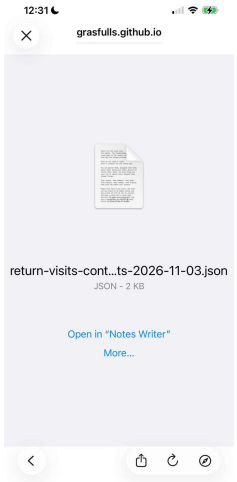

Step 76. Review the iPhone print options before printing.

Step 77. Select all shown contacts or enter display numbers/ranges for export.

Step 78. Email export omits temporary list/map display numbers.

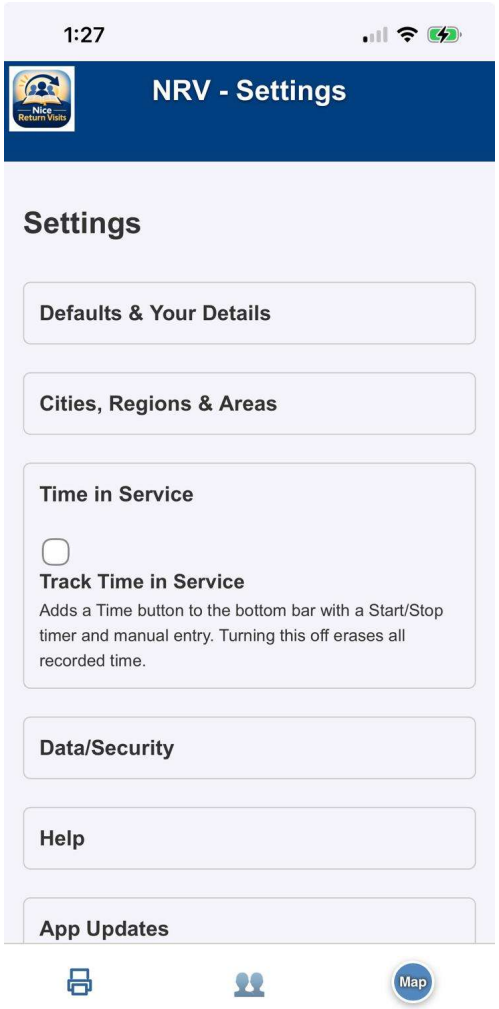

Step 79. Export File creates a dated JSON contact file for saving or sharing.

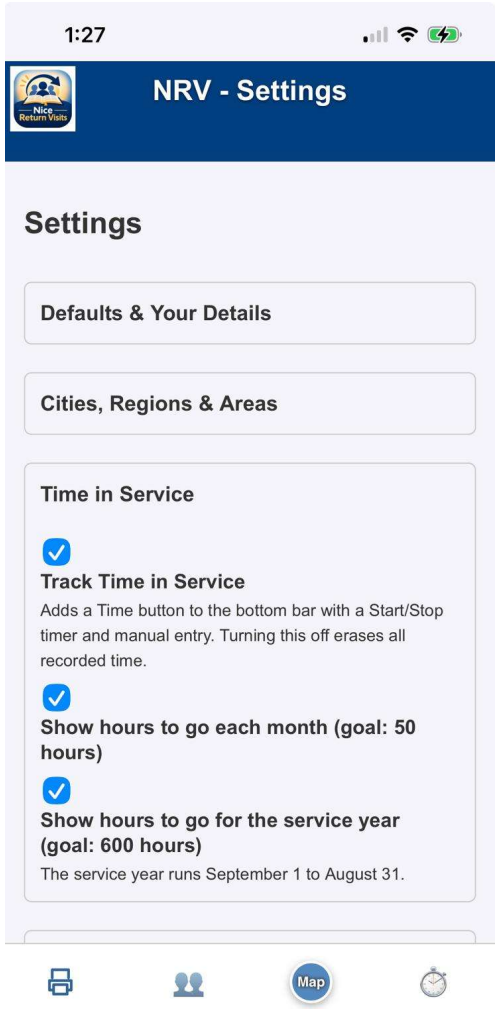

Display-number note: Export selection numbers match the current filtered/sorted contact list and map pins. They are temporary display numbers, not permanent Contact IDs.

11. Time in Service

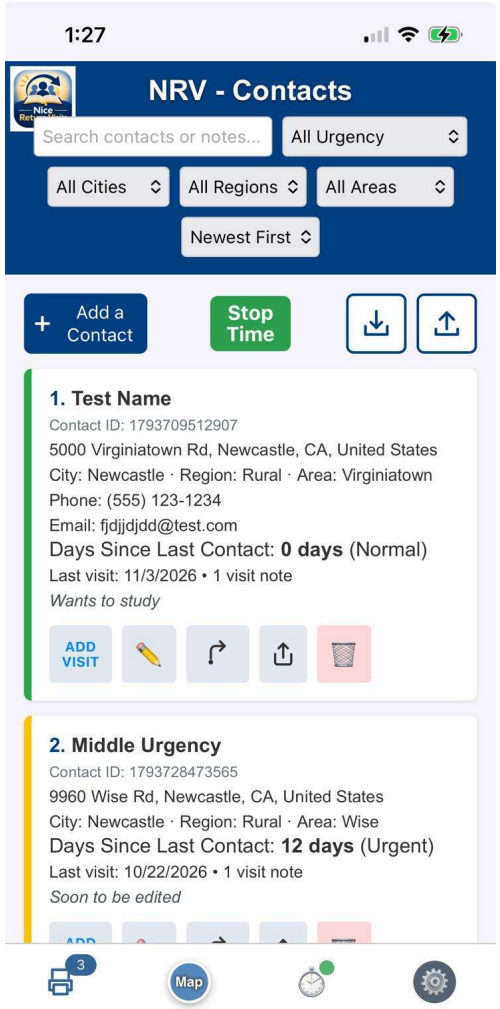

Time in Service is optional. Turn it on only if you want NRV to track service time and optional goals.

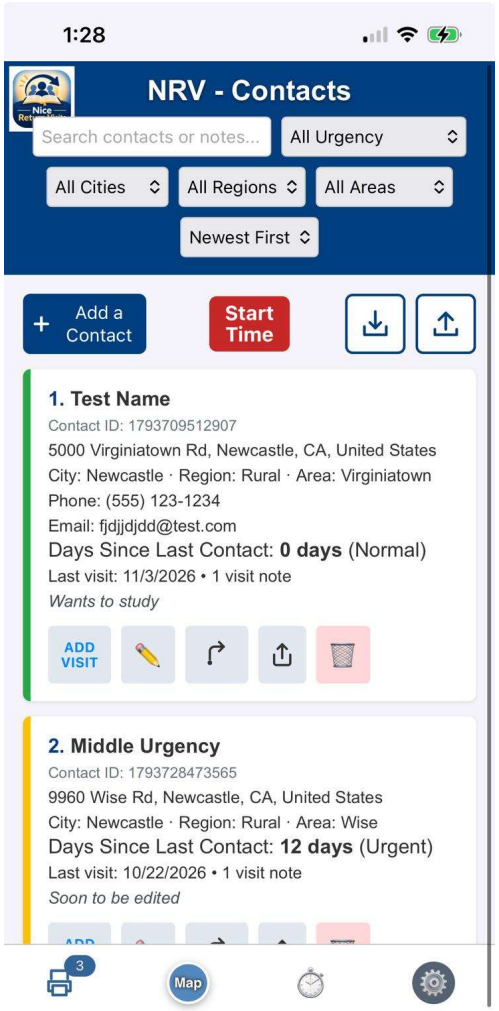

Step 80. Time in Service is optional and can remain off.

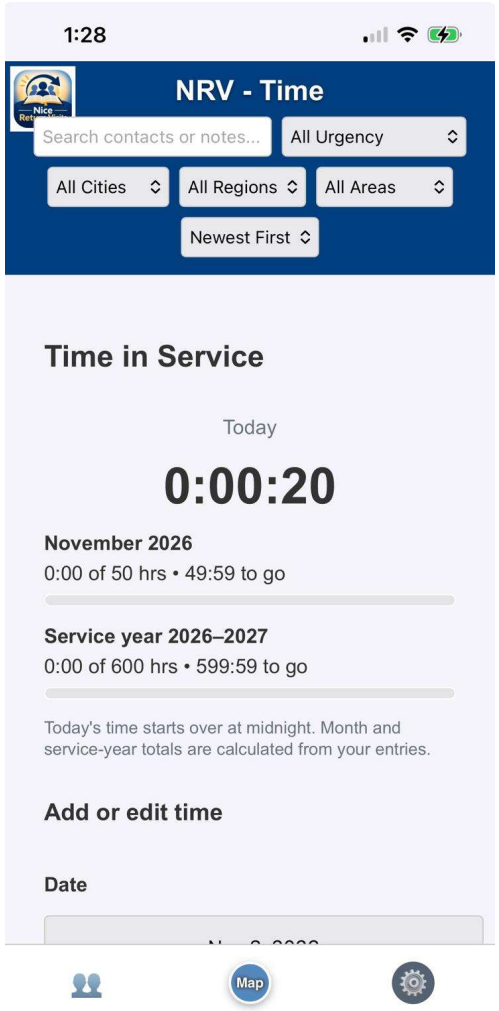

Step 81. Turn on tracking and optionally show monthly and service-year goals.

Step 82. While timing is active, use Stop Time to end the current timing session.

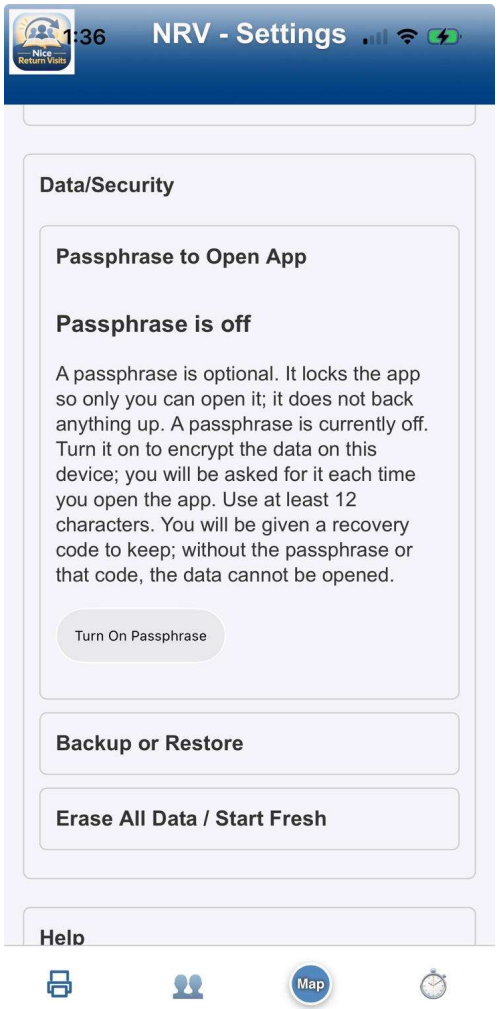

Step 83. After stopping, the contact screen returns to Start Time.

Step 84. Open Time to review totals and begin manual time entry.

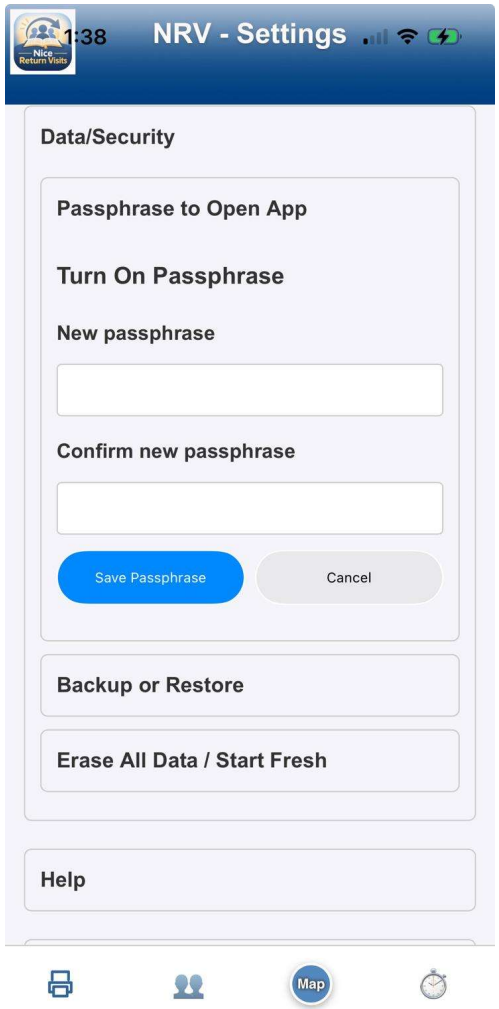

Step 85. In Add or edit time, enter the date, hours, minutes, and optional note; use Add Time to save it. Existing time entries can be edited or deleted.

12. Data/Security: Passphrase Protection

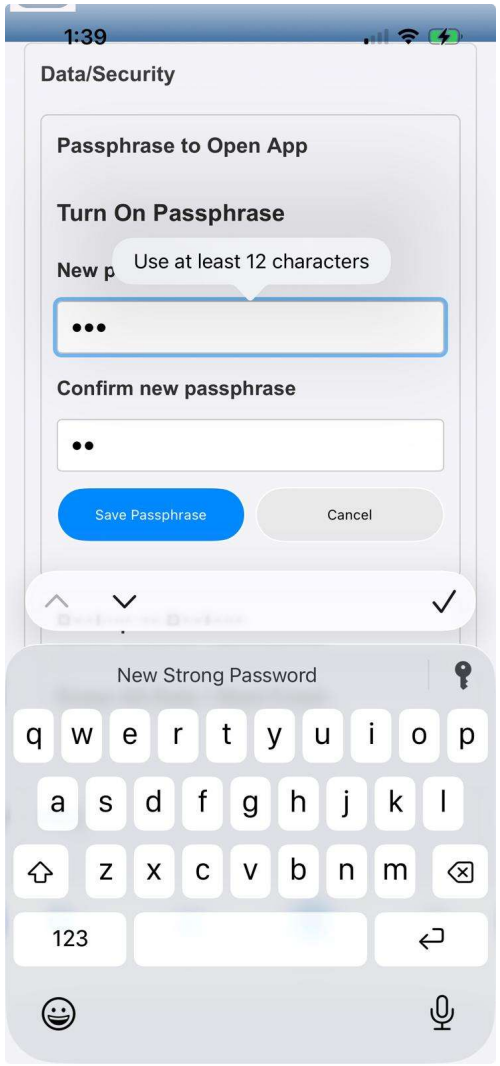

Passphrase protection is optional. If enabled, keep the recovery code somewhere safe away from the device.

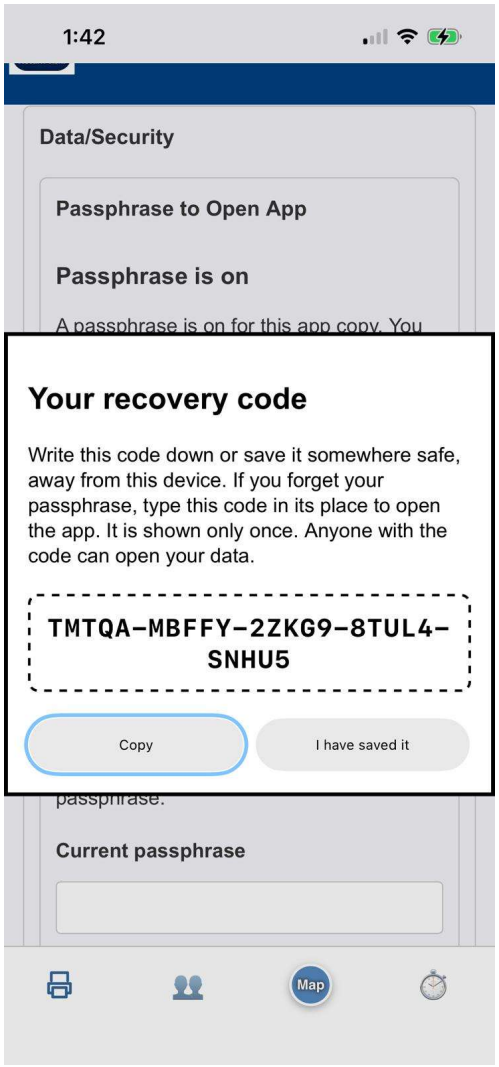

Step 86. Passphrase protection is optional and encrypts this device's NRV data when enabled.

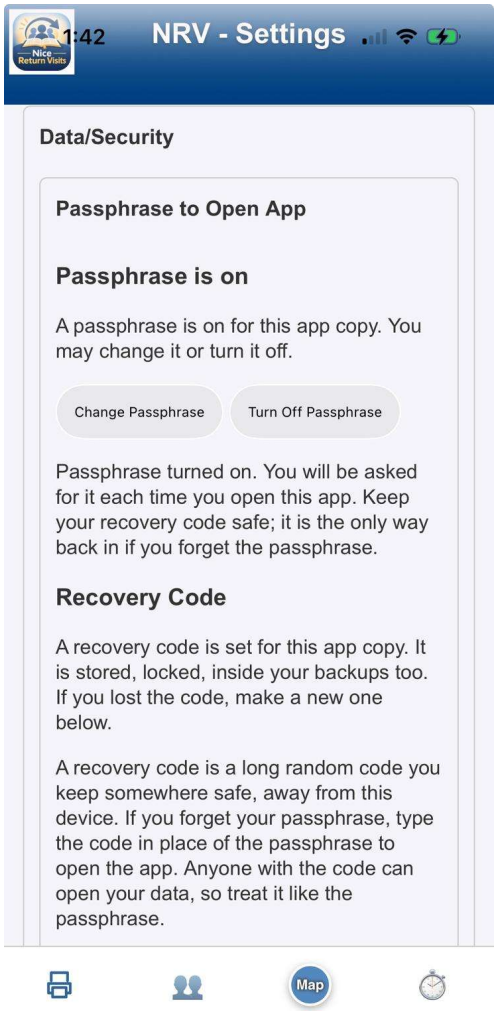

Step 87. Enter and confirm the new passphrase, then save it.

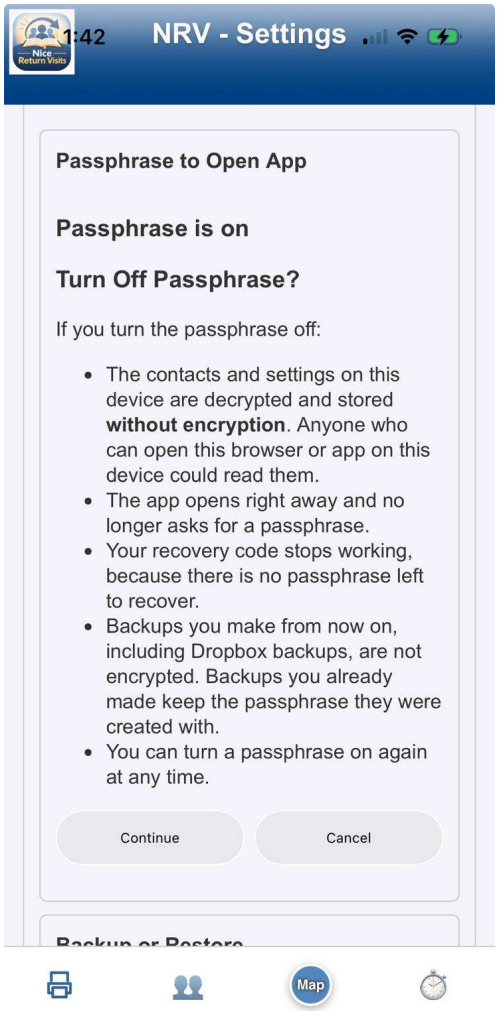

Step 88. NRV requires a passphrase of at least 12 characters.

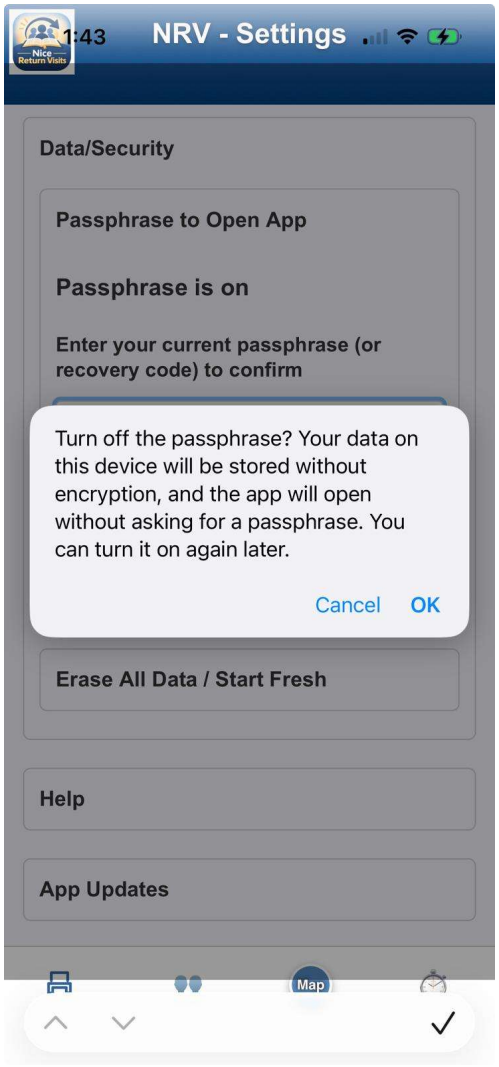

Step 89. Save or copy the one-time recovery code somewhere safe away from the device.

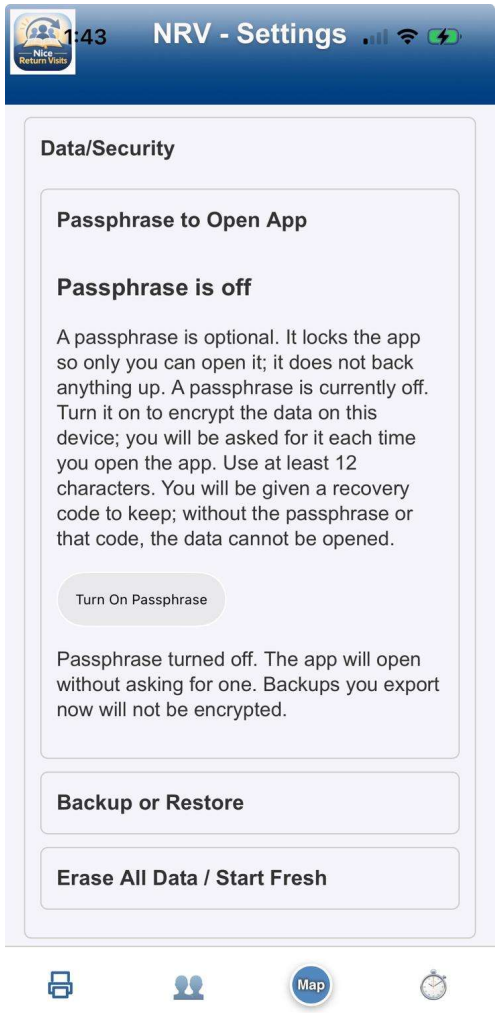

Step 90. When the passphrase is on, NRV shows the recovery-code explanation and passphrase controls.

Step 91. Review the warning before turning passphrase protection off.

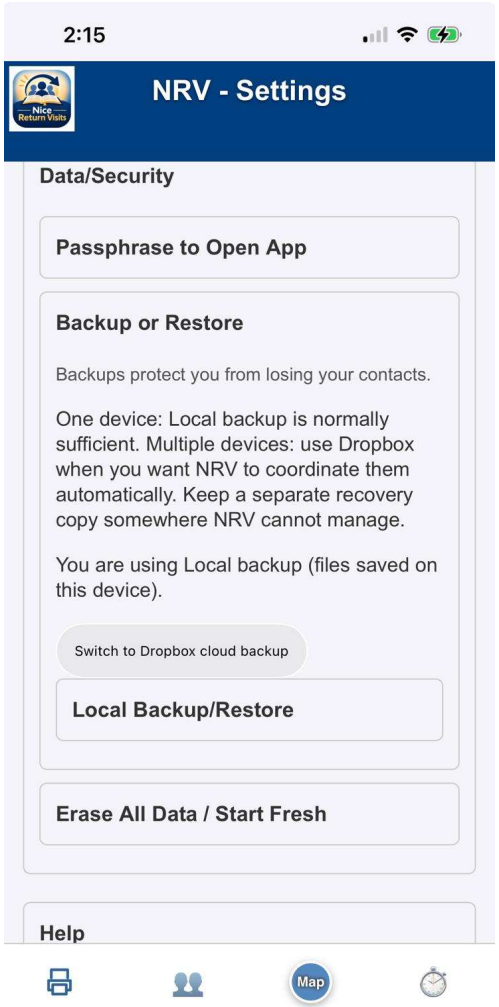

Step 92. Confirm only if you intend to turn the passphrase off.

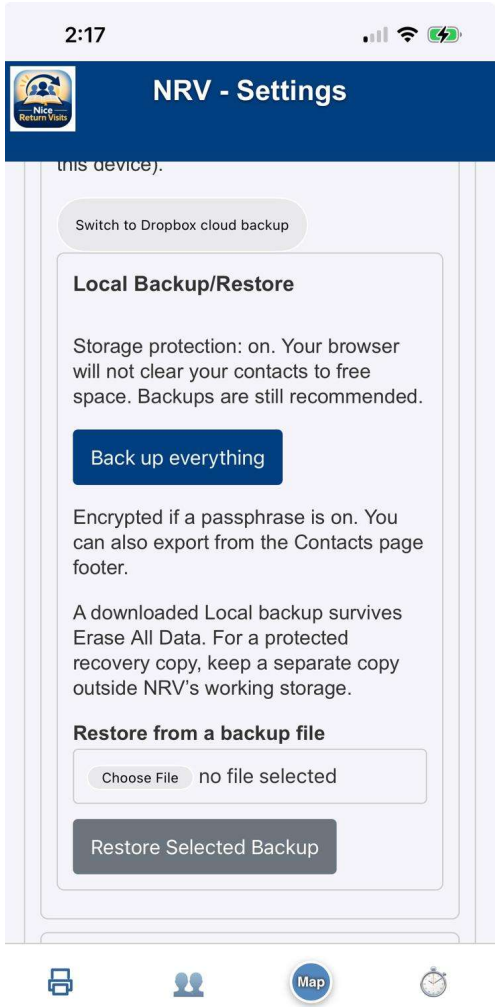

Step 93. Verify that NRV reports Passphrase is off after completion.

13. Backup and Restore

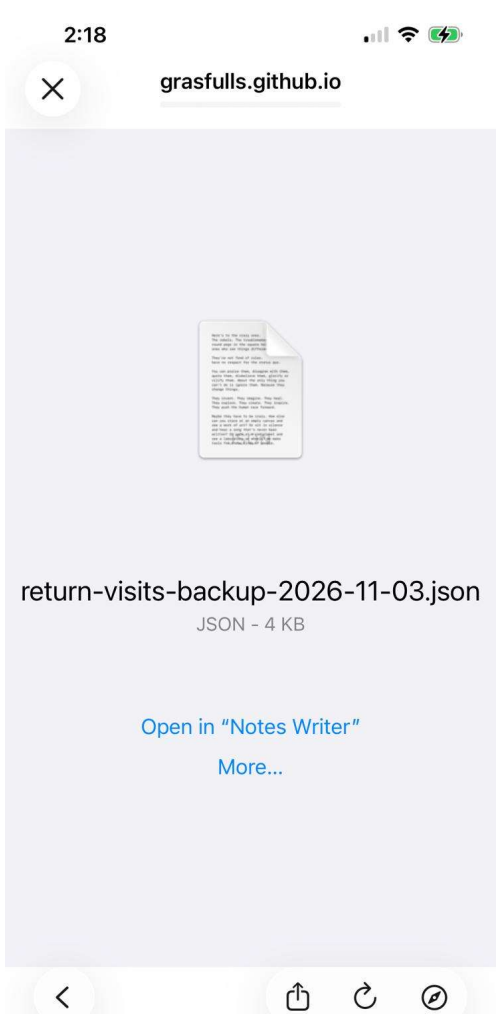

NRV supports local backup/restore and optional Dropbox cloud backup. Keep a separate recovery copy outside NRV's normal storage when practical.

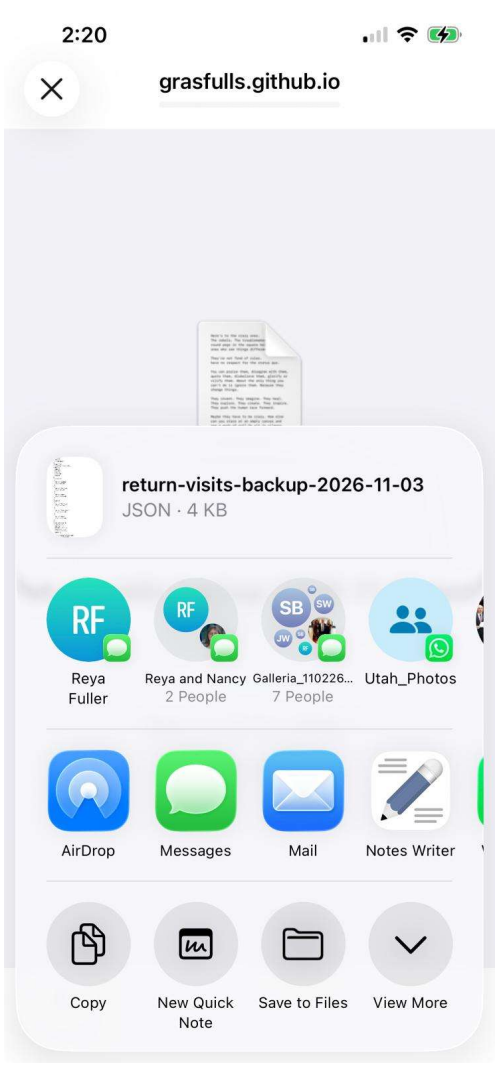

Step 94. Backup or Restore explains local backup for one device and optional Dropbox cloud backup.

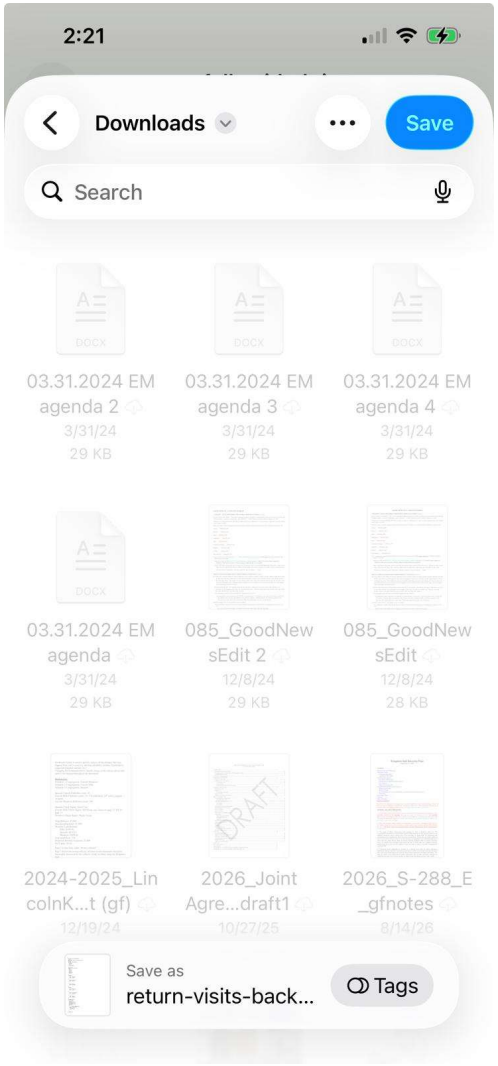

Step 95. Local Backup/Restore provides Back up everything and file-based restore controls.

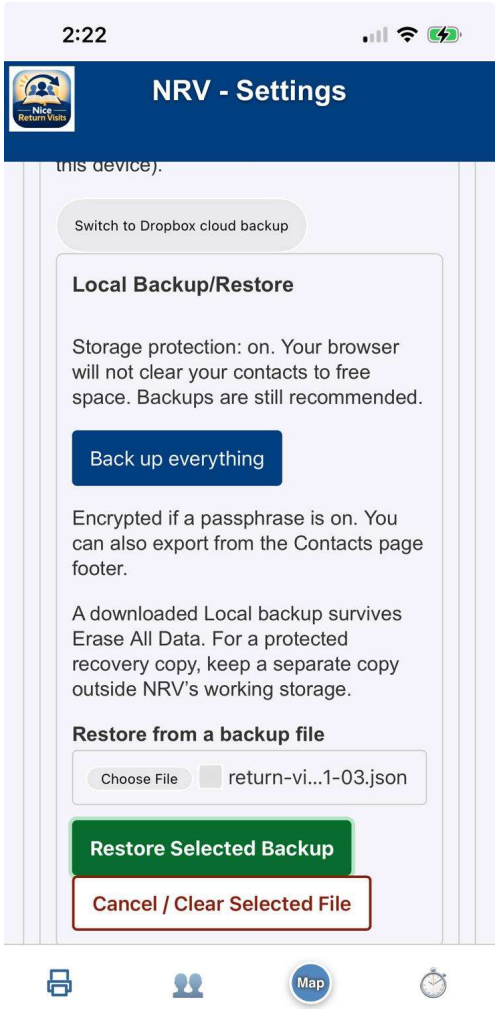

Step 96. A local backup is created as a dated JSON file.

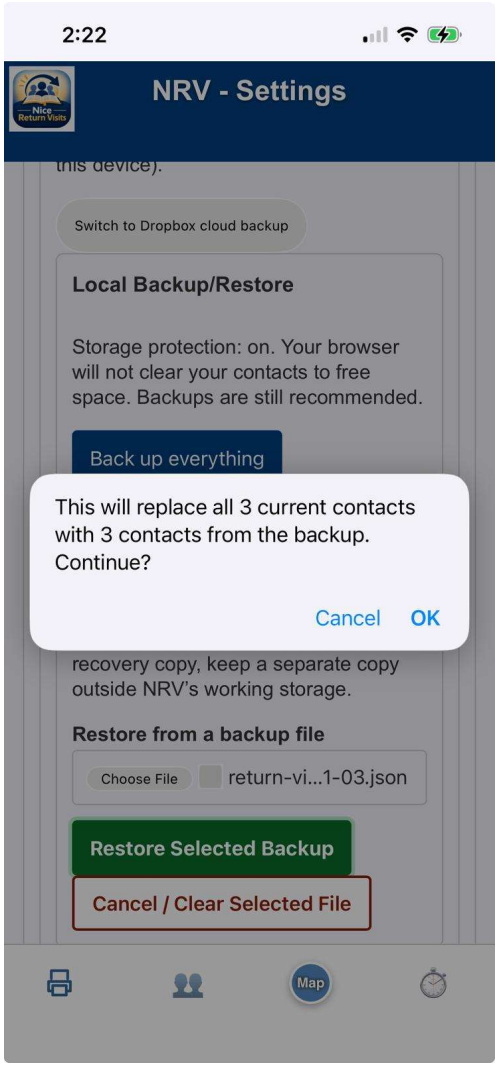

Step 97. Use the iOS share sheet and choose Save to Files to preserve the local backup.

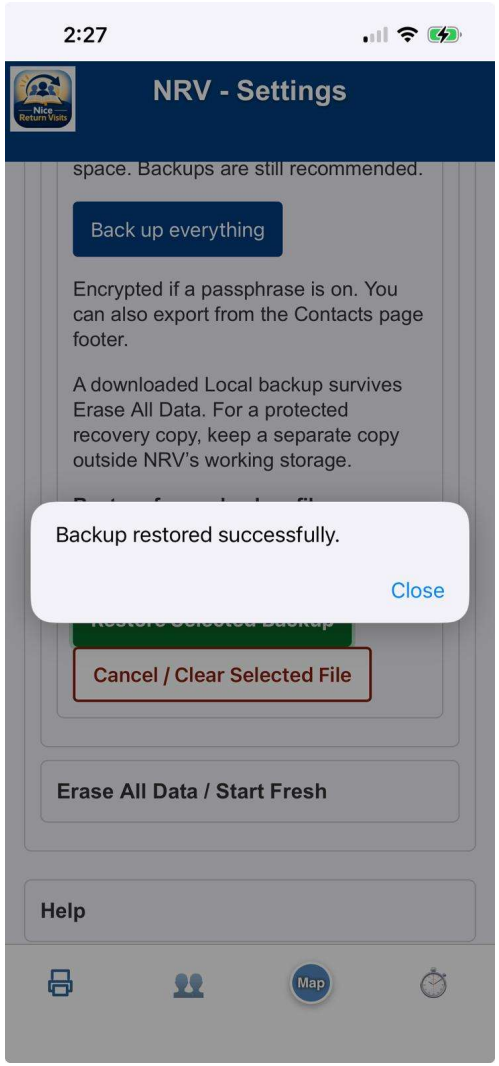

Step 98. Choose the desired Files location and save the backup.

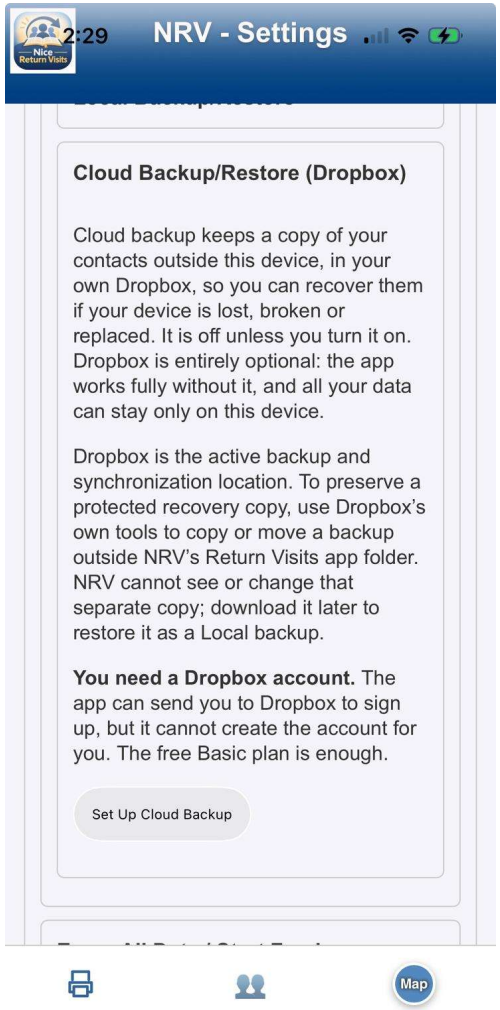

Step 99. After selecting a backup file, Restore Selected Backup becomes available.

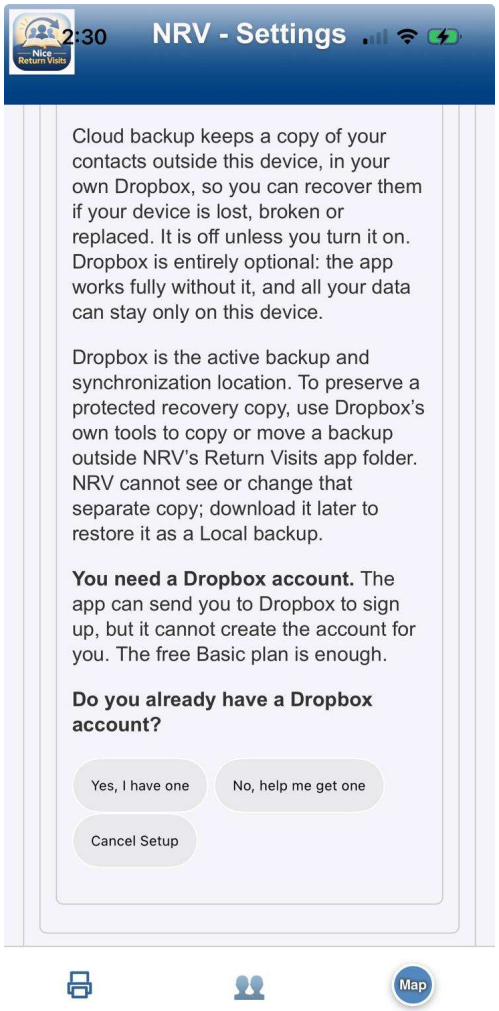

Step 100. Before restoring, confirm the number of current contacts that will be replaced by the backup.

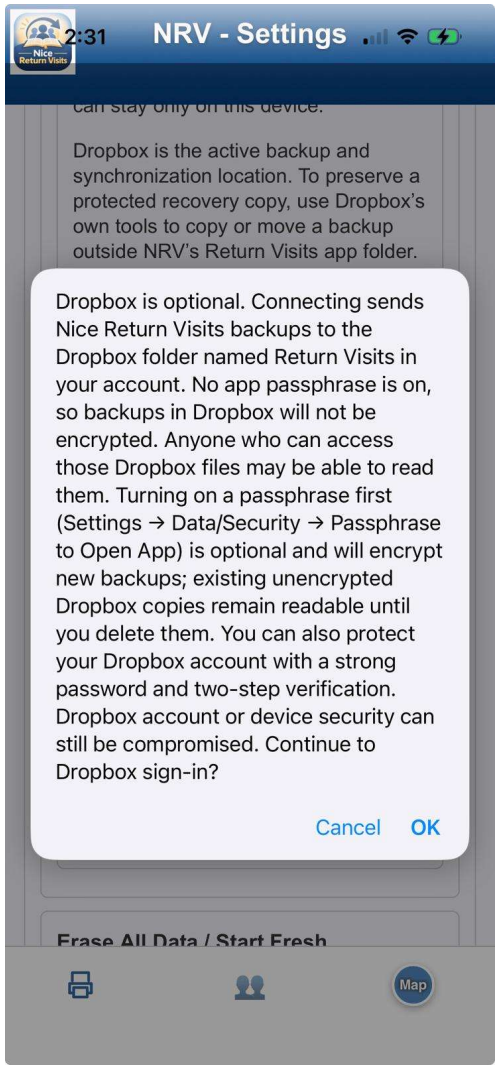

Step 101. Verify that the local backup restore completed successfully.

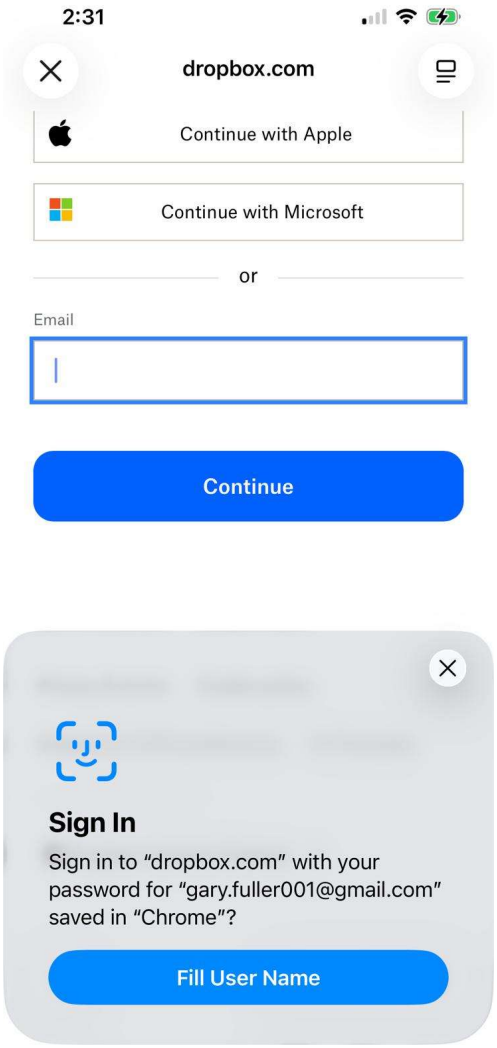

Step 102. Dropbox cloud backup is optional and requires a Dropbox account.

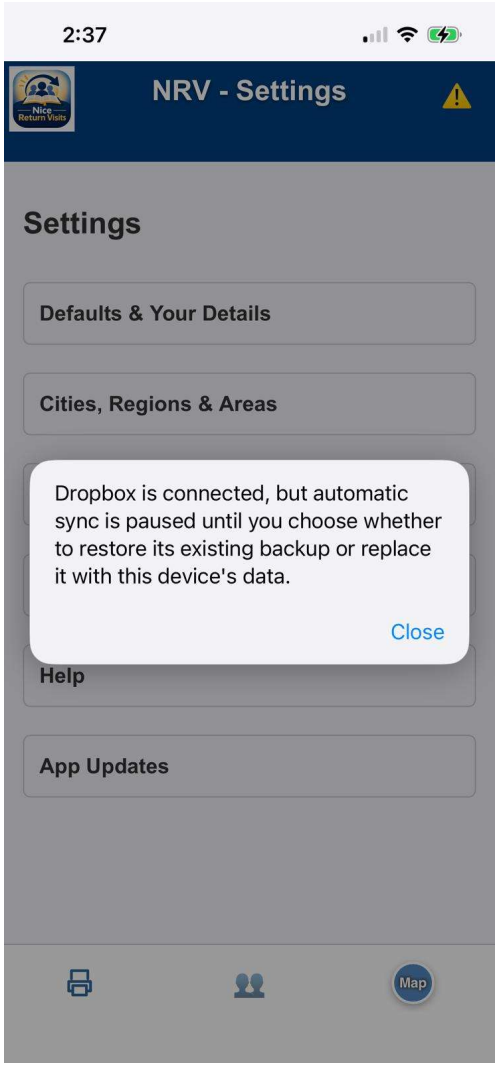

Step 103. Tell NRV whether you already have a Dropbox account or need help obtaining one.

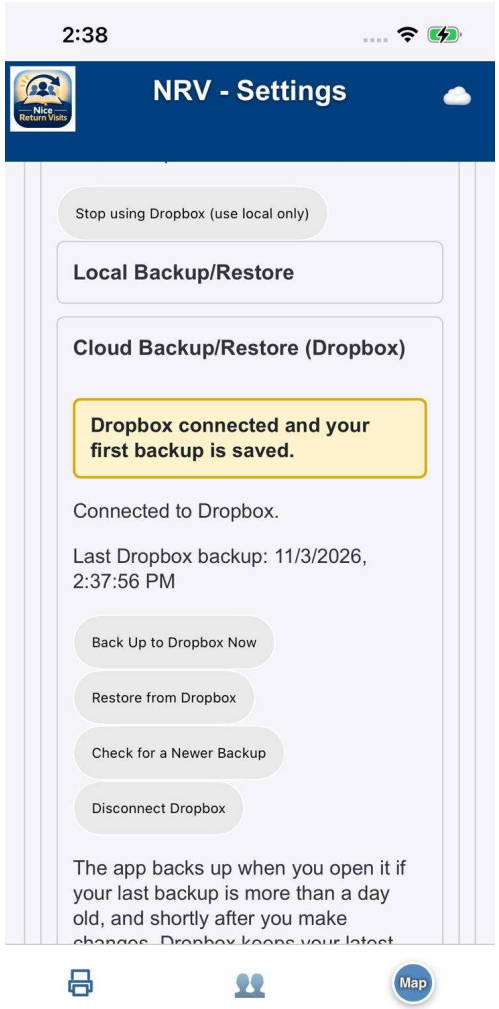

Step 104. Review the Dropbox encryption/security warning before continuing.

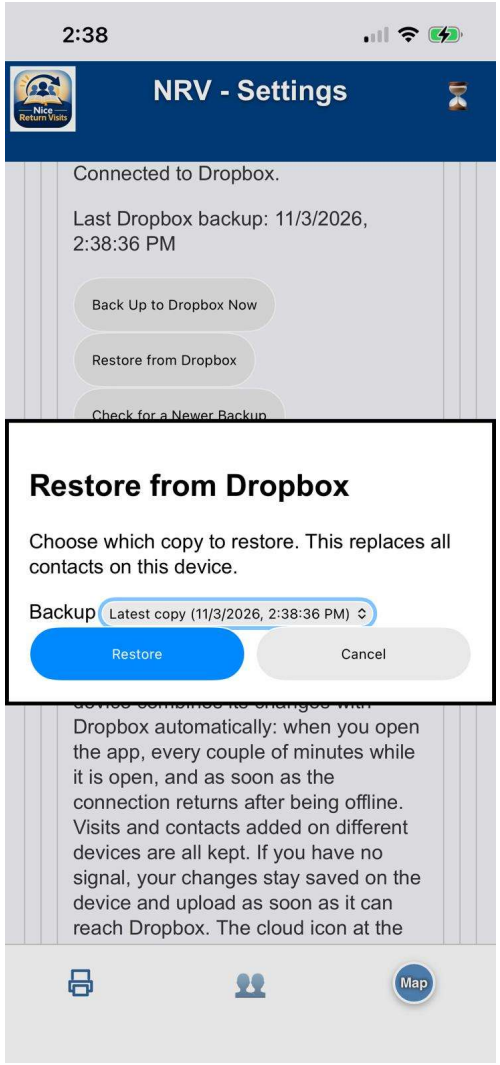

Step 105. Sign in to Dropbox. Do not store login credentials in this manual.

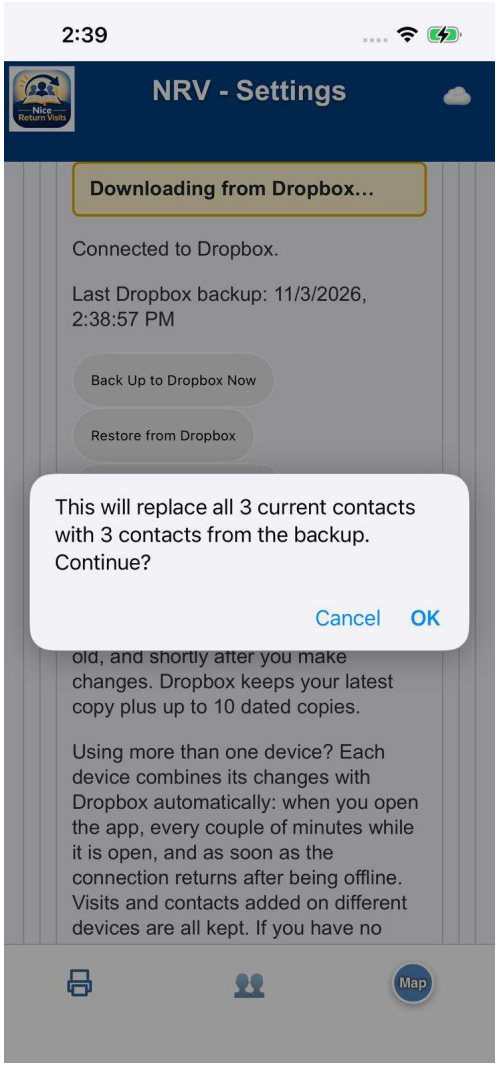

Step 106. After connecting, synchronization can remain paused until the existing Dropbox backup versus device-data choice is resolved.

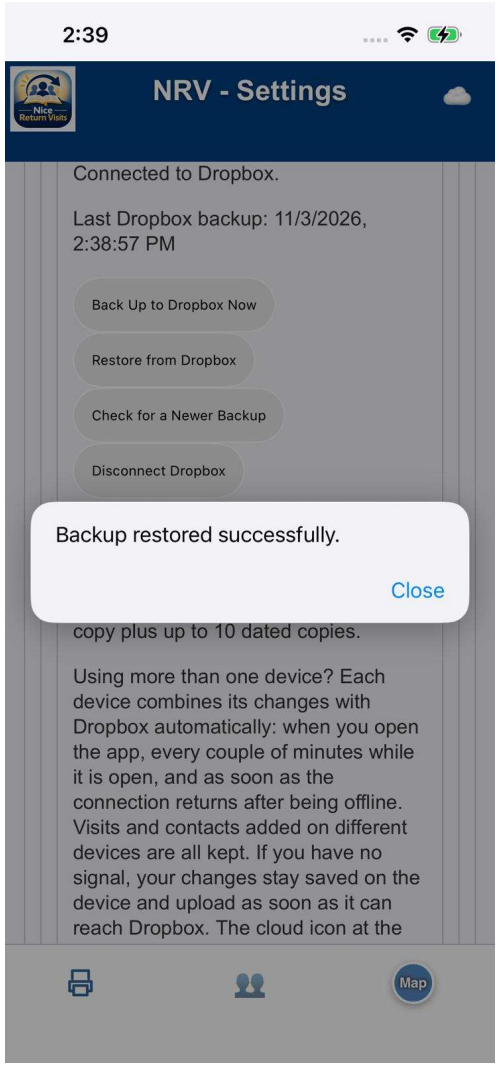

Step 107. Once connected, NRV shows Dropbox status, last backup time, and backup/restore controls.

Step 108. Restore from Dropbox lets the user select which Dropbox backup copy to restore.

Step 109. Confirm the number of device contacts that will be replaced by the Dropbox backup.

Step 110. Verify that the Dropbox backup restore completed successfully.
